AND 20, SOUTH FREDERICK STREET, EDINBURGH.
1894.
Authorized Translation.
AUTHOR'S PREFACE.

As the outgrowth of practical academic instruction, this book is designed to facilitate as far as possible, for the beginner, the acquisition of the Egyptian language and writing, and is also intended for those who must dispense with the assistance of a teacher in the study. It aims to acquaint the learner with those grammatical phenomena which are well established, and which must guide us in the interpretation of texts. It further aims to afford him as correct a picture as possible of the general structure of the Egyptian language.

For those who are familiar with the peculiar situation of Egyptian philology, I need not premise with the remark, that something else is necessary to the study of Egyptian grammar if it is to be at all a fruitful study, viz. the simultaneous acquisition of Coptic. One who is not familiar with this, the only phase of the Egyptian language which we really understand, will never properly comprehend it in its older
periods, nor, at the most ever attain more than a superficial capacity for reading Egyptian texts by rote. I would therefore request the student of my book to work through Steindorff's Coptic Grammar—a book parallel with this—and especially, to note also the constant cross references in both.

The selection and limitation of the grammatical material offered especial difficulty. The Egyptian language as we find it, presents quite different stages of development, and even leaving Late Egyptian and still later idioms out of account, fifteen hundred years of the history of the language still remain to be dealt with. These difficulties have been surmounted by relegating to certain paragraphs (A and B) the peculiarities of the ancient religious literature and the inscriptions of the old empire on the one hand, and those of the popular language of the middle empire on the other. The paragraphs therefore deal with what may be called the classic language, the language of the inscriptions and poems of the middle empire, with which the idiom later employed as the learned and official language is practically identical. The material in the chrestomathy is also taken from texts of this character in order that the beginner may accustom himself to their linguistic usage and especially to their consistent orthography. I have tried
to facilitate the understanding of the chrestomathy by division into sentences, clear print and explanatory remarks.

In the use of the book it has seemed to me that the beginner should first familiarize himself with the most important paragraphs, designated by an asterisk, and should then work through the first part of the Chrestomathy. If in doing this he not only looks up the paragraphs indicated, but also tries to form a connected idea of the sections of the grammar thus referred to, he will then be sufficiently advanced to take hold of the second part of the chrestomathy, where as a rule he must recognize the grammatical forms for himself. The appendix to the chrestomathy contains the most important of the formularies from the list which must now be mastered, in order to understand Egyptian inscriptions correctly.

It further behoves me to state, that in this book, much which is not so designated undoubtedly belongs to Steindorff and Sethe. But we have so often discussed these things among ourselves, that we could not separate our "intellectual property" even if we deemed it at all important to do so.

SÜDENDE, August 19th, 1893.

ADOLF ERMAN.
TRANSLATOR'S PREFACE.

The peculiar difficulties experienced by the translator, in transferring into English the results of the grammatical investigations of his honored teacher, Prof. Erman, render a word of explanation necessary. These difficulties were due firstly, to the unique character of the language investigated, and secondly to the fact that the new science of Egyptian Grammar, as it has been created by the German grammatical school in the last fifteen years, does not yet exist in English.*

* The above statement may seem strange to one who knows that the grammar of Le Page Renouf was reedited in 1889 ("An Elementary Grammar of the Ancient Egyptian Language" by P. Le Page Renouf, Bagster & Sons, London, 2nd. ed.). But this venerable scholar, the Nestor of English Egyptologists, has not followed the modern development in Egyptian grammar. His book is therefore entirely obsolete. Ex. gr. on p. 1 you will find the Egyptian consonants ḫ, ḫ, ẖ &c. classified under a list of vowels! and the statement added, that the "vowels were very commonly omitted", and this about a system of orthography exclusively consonantal (with the exception of one or two doubtful endings). On p. 50 the ḫn of the ḫn-form of the verb is stated to be inseparable from the subject and separable from the verb, an assertion in direct contradiction of the facts, and due to a confusion with
There were therefore no *termini technici* of Egyptian grammar ready at hand in English. The ready facility with which the German lends itself to the expression of compound ideas in one word, is entirely foreign to English and the peculiar phenomena for which a felicitous compound was always ready in the flexile German were sometimes the despair of the

the particle *in*. Or turn to p. 18 where the absolute pronoun *st* is called a suffix, the author being misled by the confusion purely orthographic in late and corrupt texts, between *st*, *sn* and *s*, for in the classic language *st* is always used absolutely, i.e. separably. In the same chapter one searches in vain for any paradigm of the old absolute pronouns. Those of the 1 c. and 3 m. s. are incidentally mentioned, the latter being called an "independent personal pronoun", but the 2 m. s., 2 f. s., 3 f. s., and *all* the plurals are wanting. But to enumerate forms and phenomena unknown to this grammar would be to repeat a large portion of the work here translated. Further, though Mr. Le Page Renouf has stated in his "Concluding Observations" that the Egyptian language suffered many changes during its enormously long history, no hint of these changes appears in the treatment of grammatical forms and syntax. The entire treatise is therefore as reasonable as would be a grammar, which, without any distinction of time, should present the forms of Latin and its offspring Italian in heterogeneous combination from the Augustan age down to the present day. If the end of the period thus included were two thousand years removed from us, the parallel would be complete and it could be stated with impunity that the Latin article was *il* and that the Italian nouns were comprised in five terminationally inflected declensions. In France the new science is equally disregarded, as the recent "Manuel de la Langue égyptienne" of Victor Loret may testify.
translator. It is hoped, however, that such terms have been made at least intelligible to the English reading student and the indulgence of the reader is craved wherever felicitous English has been sacrificed for the sake of clearness. One word has been coined, viz. "substantivized", being simply the transferred German "substantivirte". With the translation "uninflected passive" for the German "endungsloses Passiv" the writer was not at all satisfied, but could find nothing better and after consultation with the author, it stands. The term "pseudoparticiple" is another directly transferred word for which nothing better could be found; it is, both in conjugation and meaning, very similar to the Assyrian "permansive", but to have used this term would have been a liberty not justified in translating.

It only remains to be hoped that the results, achieved within the last fifteen years, which render the grammatical structure of the ancient Egyptian tolerably intelligible, and which are herewith presented for the first time in English, may be as interesting and instructive to the English and American student as they have been to the translator, from the lips of the man to whom they are almost solely due.

Berlin, Nov. 11th, 1893.

### ORTHOGRAPHY AND PHONETICS

1. In general

2. Phonetic Signs
   - a. The Alphabet
   - b. Special Points in Phonetics
   - c. Syllabic Signs

3. Ideograms

4. Determinatives

5. Orthography
   - a. In general
   - b. Orthography of the Ideograms
   - c. Purely phonetic Orthography
   - d. Abbreviations
   - e. Inversion of the Order of Words
   - f. Unusual Styles of Orthography

6. Rules for Transliteration

### PRONOUNS

1. Personal Pronoun
   - a. Personal suffixes
   - b. Old Absolute Pronoun
   - c. Later Absolute Pronoun
   - d. Expression for “self”
2. Demonstrative Pronoun.
   a. Forms with m, p, f, t. .................. 86—90
   b. Forms with n- ......................... 91—94

NOUNS.
1. Substantives.
   a. Expression of Gender .................. 95—98
   b. Forms of the Substantive ............. 99—103
   c. Expression of Number.
      a. Plural ......................... 104—106
      β. Dual .......................... 107—109
      γ. Use of the Singular, Plural, Dual ........ 110—112
   d. The Article .......................... 113—116
   e. The Absolute Substantive ............ 117—118
   f. Apposition and Coordination .......... 119—121
   g. The Genetive.
      a. Direct Genetive .................. 122—124
      β. Genetive with n ................ 125—127

2. Adjectives
   a. Adjectives without Ending ........... 128—131
   b. Adjectives in i ..................... 132—137
   c. Appendix (irī, lmy, ns) ............. 138—139

   a. Real Numerals ....................... 140—145
   b. Appendix to the Numeral ............. 146—147

VERBS.
1. In general.
   a. The Classes of the Verb.
      a. Usual Classes ..................... 148—154
      β. Rare Classes and Irregular Verbs ...... 155—160
      γ. The Causative ..................... 161
   b. Voice .............................. 162
   c. Expression of the Subject (Inflection) .... 163—169

2. Usual Inflection.
   a. In general ......................... 170—171
b. The Formation \textit{sdmf}.

\begin{itemize}
  \item[a.] The Forms of the First Group.
    \begin{itemize}
      \item[A.] Its Formation. \hfill 172—173
      \item[B.] Use as Indicative. \hfill 174—176
      \item[C.] In the Conditional sentence \hfill 177—178
      \item[D.] As a Subjunctive. \hfill 179—180
      \item[E.] In a Final Clause. \hfill 181
      \item[F.] As an Optative. \hfill 182—183
    \end{itemize}
  \item[\alpha.] The Forms of the Second Group.
    \begin{itemize}
      \item[A.] Its Formation. \hfill 184—186
      \item[B.] Use as an Indicative. \hfill 187
      \item[C.] In Conditional Clauses. \hfill 188
      \item[D.] Dependent upon Verbs. \hfill 189
      \item[E.] Dependent upon Prepositions. \hfill 190
    \end{itemize}
  \item[y.] Appendix. \hfill 191—193

\end{itemize}

c. The \textit{n}-Form \textit{sdmnf}.

\begin{itemize}
  \item[a.] Its Formation. \hfill 194—195
  \item[\beta.] Its Use. \hfill 196—199
  \item[d.] The \textit{i}-Form \textit{sdminf}. \hfill 200—203
  \item[e.] The \textit{hr}-Form \textit{sdmrhf}. \hfill 204—205

\end{itemize}

3. The Uninflected Passive. \hfill 206—207

4. Old Inflection. (Pseudoparticiple.)

\begin{itemize}
  \item[a.] Its Formation. \hfill 208—215
  \item[b.] Its Use.
    \begin{itemize}
      \item[a.] In the Active-Transitive Form. \hfill 216
      \item[\beta.] In the Passive-Intransitive Form. \hfill 217—219
    \end{itemize}

\end{itemize}

5. Compounds with Forms of the Usual Inflection.

\begin{itemize}
  \item[a.] Introduced by “it is”.
    \begin{itemize}
      \item[a.] The Forms \textit{iw sdmf} and \textit{iw sdmnf}. \hfill 220—222
      \item[\beta.] With the Auxiliary Verb \textit{wn}. \hfill 223
    \end{itemize}
  \item[b.] With Double Subject.
    \begin{itemize}
      \item[a.] \textit{iwf sdmf}. \hfill 224—227
      \item[\beta.] The Forms \textit{wnf sdmf} and \textit{wninf sdmf}. \hfill 228
      \item[\gamma.] The Form \textit{hrf sdmf}. \hfill 229
    \end{itemize}

\end{itemize}
c. With a Verb of Motion.
   a. With ChCn and ChC. ......................................... 230—234
   β. With in, prn and iw. ...................................... 235—236
   d. The Form sdmfv ... ........................................ 237

6. Compounds with ir “make”. .................................. 238—239

7. Compounds with the Pseudoparticiple or Infinitive.
   a. Without the Auxiliary Verb (Improper Nominal
      Sentence). ..................................................... 240—245
   b. Introduced by Auxiliary Verbs.
      a. With the Auxiliary Verb iw. ............................. 246—249
      β. With the Auxiliary Verb wn. ............................ 250—252

8. Compounds with r and the Infinitive. ...................... 253—254

9. The Imperative. .................................................. 255—257

10. The Nominal Forms of the Verb.
    a. Participles. ................................................. 258—261
    b. Infinitive.
        a. Its Formation. .......................................... 262—268
        β. Its Substantive Nature. ............................... 269—271
        γ. Its Use. ................................................. 272—281
    c. Substantivized Forms.
        a. In general. ............................................ 282
        β. To Denote the Action Itself. ......................... 283—288
        γ. To Denote a Person or an Object. ................. 289—292
    d. Verbal Adjective. ......................................... 293—295

11. Appendix to the Verb: the Object. ......................... 296—299

PARTICLES.

1. Adverbs. ....................................................... 300

2. Prepositions.
   a. In general. ................................................. 301—305
   b. Simple Prepositions. ...................................... 306—314
   c. Compound Prepositions. .................................... 315—317
CONTENTS.

3. Conjunctions.
   a. In general. ............................................. 318
   b. Enclitic Conjunctions. ................................. 319—322
   c. Non-enclitic Conjunctions. ......................... 323—326

THE SENTENCE.

1. The Nominal Sentence.
   a. The Simple Nominal Sentence. ....................... 327—331
   b. The Nominal Sentence Introduced by iw and wn. .... 332—333
   c. The Nominal Sentence with pw. .................... 334—335

2. The Parts of the Sentence.

INTRODUCTION.

The Egyptian language is related to the Semitic languages (Hebrew, Arabic, Aramaic &c.), to the East-African languages (Bischari, Galla, Somali and others), and to the Berber languages of North-Africa. The language of its oldest monuments belongs as far back as the fourth millennium B. C. and did not entirely die out until three centuries ago.

We distinguish the following chief periods of the language:

1. The Old-Egyptian, the oldest language treated in this book, the employment of which as the learned, literary language continued into Roman times. Peculiarities of its oldest form (found in the so-called "pyramid texts") are noted in the remarks "A" under the different paragraphs.

2. 3. The Middle-Egyptian, the popular language of the middle empire and the Late-Egyptian, the popular language of the new empire; the most important divergences found in this period are noted in the re-

Erman, Egypt. gramm.
marks "B". It is more fully treated in: Erman Sprache des Papyrus Westcar (Göttingen 1889) and Erman, Neuägyptische Grammatik (Leipzig 1880).

4. The Demotic, the popular language of the last pre-Christian centuries, written in a peculiar orthography. Cf. "Grammaire démotique", Brugsch (Berlin 1855)—of course obsolete.

5. The Coptic, the language of the Christian Egyptians written with Greek letters. Cf. the Coptic grammar, parallel with this book, by Steindorff, which I hereafter cite as "C".

3. Since the idioms cited, from 1—4, are all written without vowels, (cf. §14) the Coptic affords the only possibility of understanding the structure of the Egyptian language. It is therefore necessary, even for the beginner, to acquire a knowledge of Coptic.—Only one who is already proficient in Old-Egyptian and Coptic should venture into Late-Egyptian or Demotic.

ORTHOGRAPHY AND PHONETICS.

1. IN GENERAL.

*4. Hieroglyphic writing consists of pictures of men, animals, plants, &c.; their number is very large, though only about 500 are in frequent use. The alphabetic and syllabic signs of §§13, 33—35, and the determinatives of §47 are sufficient at the start for
the beginner; the other signs he will best learn through usage.

The writing properly runs from right to left, and only exceptionally (when employed for certain decorative purposes) from left to right; nevertheless, for reasons of convenience we always write it in the latter direction. Whether an inscription is to be read from the right or the left, is easily determined by the heads of the animal and human figures, which always face toward the beginning.

The signs stand in part vertically as \[\text{vertical signs}\], in part horizontally \[\text{horizontal signs}\]; almost the only ones used in both positions are the especially frequent signs \[\text{frequent signs}\] or \[\text{frequent signs}\] “great” and \[\text{frequent signs}\] or \[\text{frequent signs}\] (cf. § 47). The frequent abbreviation \[\text{abbreviation}\] “justified” is preferably written \[\text{preferred formation}\] or \[\text{preferred formation}\].

Caligraphy demanded that a number of contiguous signs should together form an approximate rectangle. Hence the words \[\text{hereditary prince}\], \[\text{nearest friend}\] and \[\text{praise}\], could only be written as follows \[\text{caligraphic arrangement}\]; arrangements like \[\text{unpreferred arrangement}\] would be barbarous.—At the present day we do not always closely follow this caligraphic law; but to the Egyptian
it was so important, that out of respect for it, he sometimes departed from the correct orthography. For example, in almost all cases he wrote for \textit{sch} "prince", \textit{hcb} "to play" and \textit{rmf} "man" \textit{sch}, \textit{hcb}, \textit{rmf}. Because the correct writings \textit{hbc}, \textit{rft}, were unpleasing. Similarly \textit{wt} and \textit{hft}.

\textbf{8.} It is customary to sketch the hieroglyphs exactly, only in large ornamental inscriptions; in most cases it is regarded as sufficient to outline them in a conventional manner with a few strokes. The beginner should take as his pattern practically the writing in Brugsch's Dictionary, and should especially familiarize himself with the abbreviations for the different birds there employed.

\textbf{9.} From the earliest times the individual signs were very much shortened and rounded off, when written upon Egyptian paper. We have accustomed ourselves to contrast these abbreviated hieroglyphs as a separate writing—the so-called "hieratic"—with the writing of the monuments. This is however incorrect, for they have no other points of distinction than are presented by our printed and written letters.
A knowledge of the Hieratic is not an immediate necessity for the beginner.

The hieratic writing is subdivided further into two varieties, a more angular uncial, in which the individual signs remain for the most part separated, and a more rapid cursive, which often contracts an entire word into one ligature. It was this cursive writing, out of which the Demotic (cf. § 2, 4) finally grew.

The hieroglyphic signs fall into three classes according to their meaning:

1. Phonetic signs, which are alphabetic or syllabic.
2. Ideograms, which represent a certain word, but are also very often employed for another word having the same consonants as the first.
3. So-called determinatives, i.e. signs placed after a word, to indicate its meaning in a general way.

As may be seen from the table of signs these classes are often not to be sharply defined, for original determinatives pass over into ideograms and original ideograms into syllabic signs.

2. PHONETIC SIGNS.

a. THE ALPHABET.

The alphabet (the arrangement of which is modern) is as follows:
To these are further to be added two secondary signs:

B. Since the new empire @ is also written for w, \( \underline{\underline{\text{\(\_\)}}} \) for m and \( \underline{\underline{\text{\(\_\)}}} \) for n.

14*. Our transliteration of these signs must be regarded only as an approximate equivalent of the respective sounds; but by means of the Coptic (cf. C. § 15) and
the manner in which Semitic words are transcribed in Egyptian, and Egyptian words in Semitic, it is an established fact that all signs represent consonants. The vowels, just as in Semitic writing, are not indicated.—For the exceptional use of some few consonants for the indication of certain vocalic endings cf. §§ 15—16; 18; on \ i cf. § 27.

\^\# probably corresponds approximately to \^\#. But in many words \^\# early became \^, a pronunciation, often indicated by the addition of \^\# y, e. g. \^\# h\^\# “husband” (*ha\^\#), since the n. e. written \^\# h\^\# y i. e. *haj, copt. 2\#1 (cf. C\$ 15 a, 2).—In the later syllabic writing (cf. § 70) \^\# is also used for indication of a vowel.

\^\# \^ etymologically corresponds to \^ and in many 16\#. words always remained a \^, e. g. \^ \^\# \^\# “father”, copt. \^\# \^\#. But with most words it was early lost, cf. \^\# \^\# \^\# “wine”, copt. 2\#1 (from \^\# \^\#), or \^\# \^\# \^\# \^\# copt. 2\#1 \^\# “Amon” (from \^\# \^\#, Cf. C\$ 15 a, 1 and Rem.)—In certain endings \^ \# was used in the oldest orthography to indicate an i, which the later orthography indicates by \^\# (cf. § 27).
17. □ c corresponds to Semitic v and this pronunciation was very long preserved; but in Coptic it has disappeared.—Cf. C§ 15 Rem.

18. ὑ w corresponds to Semitic ρ, Copt. ργ; in the syllabic orthography (Cf. § 70) and in a few endings, ῥ is also used to indicate a vowel (something like u).

19. α f about corresponded to our English f; □ p to the Semitic ρ.—Cf. C§ 12 b c.

20. Ψ r, represented l as well as r, cf. C§ 8. In certain words ρρ̃ n also was probably pronounced like an l; C§ 8 a, 2.

21. □ h is Heb. נ, arab. ٠ h and ◐ h differ like arab. צ (something like hh) and ג (something like German ch in ach); nevertheless in many words ◐ h appears to have also possessed a softer sound, for it interchanges with ג.—□- was originally a special sound, standing very near to ◐; but both were so early merged into one sound that we transliterate them with one and the same sign h. Cf. C§ 14.

22. — and □ were likewise originally different sounds; but they were also so early merged into one sound that we transliterate them both with the same sign s. □ ρ corresponds to ρ ρ our sh. Cf. C§ 13.
2. PHONETIC SIGNS. a. THE ALPHABET. 23—27.

\( \Delta k \) corresponds to \( p \), \( k \) to \( z \); \( \Delta g \) is a sound very near to \( p \), but not to be defined more closely. Cf. C§ 10, 24.

\( \Delta t \) corresponds to Semitic \( n \); \( \Delta t \) is a special modification of the same sound, which must have sounded about like \( o \) in the n. e. But at a very early period \( \Delta \) had, in most words already passed over into \( \Delta \). Cf. C§ 11 a, 2.

\( \Delta d \) corresponds for the most part to Semitic \( \Delta \). \( \Delta d \) is a special modification of the same sound, which must have sounded something like \( x \). But in most words \( \Delta \) very early passed into \( \Delta \). In the latest period \( \Delta \) becomes \( t \), so that it coincides with \( \Delta \) in Copt. Cf. C§ 11 a, 4.

\( \Delta \) is still the indication of two \( \Delta \)'s in the oldest texts, e. g. \( \Delta \) msit (something like *mēsiol* “I bear”, cf. \( \Delta \) msis i. e. *mēsis* “she bears”). From the m. e. down it is written for \( \Delta \), in so far as this has remained \( \Delta \), (cf. § 16), only, however, at the end of word stems and in certain endings; we then transliterate it with \( y \).

\( \Delta i \) is a sign used since the m. e. for the frequently recurring grammatical ending \( i \); it cannot stand at the beginning or in the middle of a word. Concerning its origin cf. § 108.
b. SPECIAL POINTS IN PHONETICS.

28. Certain sounds, for which a sign is wanting, are expressed by a combination of several. Such is a kind of \( \approx r \) occurring as the final letter of many words, which interchanges with \( \approx i \) and is written \( \approx \); and further the combination \( \approx \) and \( \approx \) for initial \( \approx \).

29. The weakness of the breathing \( \approx \) produces peculiar phenomena. In many words it stands, sometimes as second, sometimes as third consonant; \( \approx m \) and \( \approx m^2 \) "pleasant", \( \approx m^2 \) and \( \approx m^2 \) "create"; \( \approx l^3 \) "column" and \( \approx l^3 \) "hall of columns" &c. Along with these occur forms like \( \approx m^2 m \) with \( \approx m^2 \) "create", \( \approx m^2 m \) with \( \approx m^2 \) "kill", \( \approx l^3 l^3 \) with \( \approx l^3 \) "seek"; cf. § 157. In very many words \( \approx \) was also early lost. — Similar phenomena appear sometimes with \( \approx \) also.

30. A further interchange is \( \approx s \), \( \approx s \) and \( \approx \); also \( \approx s \) and \( \approx l \), e.g. \( \approx s p \), \( \approx s p \) and \( \approx p \) "receive", \( \approx s \) and \( \approx s \) "wise", \( \approx l m \) and \( \approx l m \) "holy of holies".

31. Remarkable is the writing of \( \approx l \) "father" (copt. \( \approx l o T \)) which since the oldest times appears also as \( \approx \) or \( \approx \).

c. SYLLABIC SIGNS.

32. Along with the simple consonants, syllabic signs were also used which, according to § 40 have become
pure phonetic signs from original ideograms. Thus 𓊰, really an ideogram for wr “great”, appears as a syllabic sign in swri “drink”, wrs “spend time”, wrh „anoint” &c.; 𓊰𓊵, really an ideogram for mn “remain”, appears as syllabic sign in hsmn “natron”, mnh “wax” etc. For further examples cf. the list of hieroglyphs.

The syllabic signs, whose second consonant is 𓊰, are of importance for the beginner, for such syllables for the most part must be written with these signs. To be noted are:

\[
\begin{align*}
&\text{c}^3, \text{p}^3, \text{h}^3, \text{k}^3, \text{d}^3, \\
&\text{n}^3, \text{m}^3, \text{s}^3, \text{t}^3, \\
&\text{h}^3, \text{h}^3, \text{k}^3, \text{t}^3
\end{align*}
\]

Of these k^3 and t^3 occur also in syllabic writing (𓊰, 𓊵) occasionally also h^3; with all the others the syllabic sign must be used. The rare exceptions (like in sb^3 “door” and db^3 “restore”) probably indicate peculiar phonetic conditions in these words.

The syllabic signs in n are almost as frequent as 𓊰. the above; for these, however, the alphabetic writing may also be used:
*35. Note further the syllabic signs: perhaps $l_4$, $t_4$ or sometimes also $l$, probably $r_3$.

(cf. § 256) $m$ but early used in many words as initial $m$ (cf. § 102).

(like the sign for $s$) or $a$ (cf. § 43), the sign of the ending $tiw$ (cf. § 133), incorrectly also for $ti$.

3. IDEOGRAMS.

*36. The ideograms originally denoted the objects which they represent:

- $pr$ house,
- $nt$ city,
- $rc$ sun,
- $ib$ heart,
- $bt$ wood,
- $hr$ face,
- $ms$ soldier,

&c.

*37. Since abstract conceptions and the like cannot be sketched, concrete objects in some way suggestive of them are used as ideograms for them:

Scepter is the ideogram for $hk$ "reign",
Staff of office for ḫrp "lead",

Plant used as the arms of upper Egypt for rs "south",

Sacred falcon for Ḥr "God Horus",

Target for st "shoot".

In a few cases more than one sign are found united to form one ideogram, as ᴫ.ListBox "the uniter (of Egypt)" ᴡ.ListBox "this" etc.

An ideogram is used not only for one specific word but also for all forms derived from it, e. g. not only for nt "city" but also for the plural nw.t "cities", as well as the adjective nti "urban" and all its forms. Likewise, is used for all forms of the verb ḫk.w “reign” and the substantivs ḫk.w “ruler” ḫk.wt “ruler” (fem.). The ideogram therefore denotes only the consonants forming the stem, and not in any way a special vocalization of it.

Although, according to the above remarks, only words belonging to the same stem may properly be written with the same ideogram, nevertheless the Egyptians from the oldest times transferred many signs to such words as accidentally contained the same consonants, without belonging to the same stem.
Thus e. g.:

- $pr$ "house" transferred to $pr$ "go out",
- $htp$ "offering" transferred to $htp$ "rest",
- $nfr$ "lute" transferred to $nfr$ "good",
- $m3\breve{c}t$ "flute"
- $hpr$ "beetle"
- $s\breve{s}$ "goose"
- $wr$ "dove"

In this manner ideograms for all sorts of abstract conceptions were obtained.—Many of these signs were further transferred to so many words that they eventually became purely phonetic syllabic signs, thus e. g.

- $wr$ "great" $p3$ "fly" &c. Cf. § 32 seq.

Since words like "good, truth, become, son, great" &c. occur much more frequently than words like "lute, flute, beetle, goose, dove" &c. the original concrete meaning in the case of many such ideograms was therefore nearly forgotten.

A few ideograms really have double values, so e. g. $\breve{\Phi}$ which is employed for $tpt$ "head" and $d3d3$ "head". In many cases however where a double value apparently occurs it has been caused by the subsequent merging together of two originally different signs. Thus, in the merging together of the signs
3. Ideograms. 43. 44.

\[ \text{and } \text{, one of which meant } \text{hrp "lead" and the other } \text{shm "mighty"}, \text{ one sign } \text{ with both meanings found its origin, &c.} \]

A similar confusion of different signs occurs so 43. frequently, that it is often no longer possible to determine the correct form of a sign. Note especially the difference in:

\[ \text{Δ g. Δ nst "throne", } \text{Δ yr "below,} \]
\[ \text{Δ kpd "build" &c., } \text{Δ lst "troop",} \]
\[ \text{Δ hrm "voice", } \text{Δ mdw "speak"} \]
\[ \text{and } \text{tīw, } \text{and } \text{nh,} \]
which are regularly confused in the inscriptions.

The following frequently recurring ideograms are 44. differently formed from all others:

\[ \text{Δ in "go", } \text{Δ l "go", } \text{Δ sm "come",} \]
\[ \text{Δ sb "walk through", } \text{Δ t "rob"}, \]
in which one sign of going is separated into different ideograms by the addition of consonants. Similarly differentiated are:

\[ \text{Δ in "bring", } \text{Δ bs "bring in",} \]
\[ \text{Δ rs "south", } \text{Δ kmc "south",} \]
\[ \text{Δ rnpt "year", } \text{Δ tr "time", } \text{Δ rnp "bloom"}. \]
The determinatives, the latest part of the Egyptian writing, are intended to facilitate the reading; with very frequent words, which every one recognizes of himself, they are not used, e. g. \( iw \), "to be", \( irt \) "do", \( wr \) "great", \( m \) "in" &c.

A. The determinatives are still, far rarer in the pyramid texts than later.

B. At a later period there is an inclination to attach several determinatives to a word; in this case the more general (cf. § 47) comes after the more special.

A few determinatives represent exactly the object which their word denotes e. g. the determinative of heaven and of crocodile in the words \( pt \) "heaven" and \( msh \) "crocodile".

But those determinatives are far more numerous and important, which indicate only in general the meaning of their word, like that of the tree in \( isr \) "tamarisk". Note especially:

- man,
- woman,
- people,
- revered person,
- goddess,
- animal,
- bird, insect,
- plant,
4. DETERMINATIVES. 48. 49.

When a determinative is difficult to write, especially in manuscripts, an abbreviation \ is used, e.g. \(\) st “Isis” for \(\).

Exact scribes, especially those at the end of the m. e. distinguish still closer differences in determination. They mark a determinative with \(\), in order to render its meaning general, e. g.:

- \(\) hrrt “flower” but \(\) i\(\)škt “onion”(?).
These scribes further add the sign \( I \) to a determinative, in order to restrict its meaning, e. g.:

- \( \bigcirc \) rk “period of time”, but \( \square \) hrw “day”,
- \( \bigcirc \) m\( \text{h\( t\)i} “northern”, but \( \bigcirc \) m\( \text{r\( y\)t} “dyke”.

B. In the n. e. these additional signs \( III \) and \( I \) are often incorrectly employed.—To the m. e. belongs the rare practice of occasionally furnishing the determinatives \( \bigotimes \) and \( \bigodot \) with the feminine ending \( t \) (\( \bigotimes \), \( \bigodot \)), as if they were the substantives \( n\text{t} “city”, s\text{m} “land”.

The stroke must be regarded as a special kind of determinative which is added to substantives, which are written with only one sign and have no other determinative, e. g.:

- \( \bigcirc \) dw “mountain”, \( \bigcirc \) r\( s \) (?) “mouth”,
- \( \bigcirc \) c “arm”, \( \bigcirc \) s\( s \) “son”,

or (with the feminine ending \( t \)):

- \( \bigcirc \) d\( t \) “hand”, \( \bigcirc \) s\text{m} “desert” etc.

Nevertheless the usage varies much here and two exceptions to the law here given are found in all texts:

- \( \bigotimes \) hr 1. “face”, 2. “upon” with \( I \) even when the word is a preposition, not a substantive.
- \( \bigotimes \) s “man” with \( I \) notwithstanding the other determinative which follows.—cf. also § 58.
5. ORTHOGRAPHY.  

a. IN GENERAL.

The orthography, which experienced great transformations in the course of time, determines in an often arbitrary manner how far phonetic signs, ideograms, and determinatives must be employed in writing different words. The most widely spread and important system of orthography which may be designated as classic, is found in the greatest purity in the manuscripts of the m. e.; with this system the beginner should seek to make himself as familiar as possible, before he approaches texts in another orthography.
54. The orthography of the pyramid texts is exceedingly variable, and renders the understanding of them very difficult indeed; but for us it is of importance, because it often—even though not consistently—distinguishes grammatical forms which the classic orthography leaves undistinguished.—The orthography of the o.e. seeks the greatest possible brevity.

54. ORTHOGRAPHY OF THE IDEOGRAPHMS.

The majority of words are written with an ideogram, to which is added an indication of its pronunciation in alphabetic signs. Whether all the consonants of the word are to be written, or only a part; whether they are to stand before or after or on both sides of the ideogram, is decided by usage for each separate word. The following paragraphs present the usage of the classic orthography.—Caligraphy (cf. § 7) is moreover often the motive for the selection of a given writing.

55. Usually it is only the final consonant which is added. To biliteral ideograms the final consonant is subjoined, e.g.:

\[ \begin{align*}
\text{pr} & \rightarrow \text{go out}, \\
\text{ms} & \rightarrow \text{to bear}, \\
\text{hd} & \rightarrow \text{white},
\end{align*} \]

to triliterals the final consonant, e.g.:

\[ \begin{align*}
\text{hpr} & \rightarrow \text{become}, \\
\text{chc} & \rightarrow \text{stand},
\end{align*} \]
or also—but more rarely—the last two consonants, e. g.:  

\[ \begin{align*}  
\text{Cn\#} & \text{ "live"} \\
\text{nfr} & \text{ "good"}. 
\end{align*} \]

More rarely all the consonants are written, e. g.:  

\[ \begin{align*}  
\hbar & \text{ "feast"} \\
\text{sp} & \text{ "times" (germ. Mal),} \\
\text{spd} & \text{ "prepare"}, \\
\text{sh\#} & \text{ "field"}, \\
\text{grg} & \text{ "sieve possession"}, \\
\text{sb\#} & \text{ "star"}. 
\end{align*} \]

A. In the oldest orthography writings of just this kind are frequent, cf. e. g.:  

\[ \begin{align*}  
\text{Ch\#C} & \text{ "stand"}, \\
\text{Ch\#C} & \text{ "palace"}, \\
\text{Lord} & \text{ instead of the classic writings} \\
\text{Ch\#C} & \text{ "command"}, \\
\text{Ch\#C} & \text{ "unite"}, \\
\text{Cr} & \text{ "storehouse"}, \\
\text{mr} & \text{ "be sick"}, \\
\text{mr} & \text{ "pyramid"}. 
\end{align*} \]

Finally in some isolated cases the initial consonant of the ideogram or its entire phonetic writing is placed after it, e. g.:  

\[ \begin{align*}  
\text{wd} & \text{ "to command"}, \\
\text{dmd} & \text{ "unite"}, \\
\text{Cr} & \text{ "storehouse"}, \\
\text{mr} & \text{ "be sick"}, \\
\text{mr} & \text{ "pyramid"}. 
\end{align*} \]

A. This is also a remnant of the oldest orthography; in the pyramids such writings are frequent.
58. Only a few especially frequent ideograms—except the abbreviations of § 67—are left without any phonetic addition, as:

- hr "face",
- pr "house",
- ntr "god",
- mšc "army",
and the feminines:
- ḥt "house",
- st "Isis",

and:

- ss (?) "scribe",
- nb "every",
- nb "lord",
- mḥ "fill",
- hr "face",
- nb "every",
- nb "lord",
- mḥ "fill",
- sr "scribe",
- nb "every",
- nb "lord",
- mḥ "fill",

59. All words for which the orthography possesses no ideogram are written with purely phonetic signs—i.e. without ideograms. These are in part very frequently recurring words, like:

- ḫw "to be",
- bīn "bad",
- ṛn "name",
- mšl "lion",
- swrī "drink",

A. In the oldest orthography the purely phonetic writing is very frequent. Note the rare cases for ḫt "field", which also occur occasionally later.
Since the syllabic signs employed in these writings were, according to § 40, originally ideograms, the pronunciation is added to them in the same way. It is mostly the final consonant which is written, e. g.:

- ms, \( \overline{\text{mn}} \), mr, \( \overline{\text{hr}} \), \( \overline{\text{wn}} \), &c.
- p\(^2\), \( \overline{\text{m}} \), s\(^\dagger\), s\(^\ddagger\), s\(^\mathcal{N}\), t\(^\mathcal{N}\) &c.

But in many cases the initial consonant also is written (and such syllabic signs are thereby distinguished from the real ideograms, cf. § 56) e. g.:

- t\(^\mathbb{N}\), sk, \( \overline{\text{tm}} \), \( \overline{\text{hn}} \), \( \overline{\text{g}} \), b\(^\mathbb{N}\), t\(^\mathbb{N}\), \( \overline{\text{nw}} \), &c.

As a rare writing note that of the syllabic sign \( \overline{\text{nw}} \), in which the phonetic value is indicated by means of another frequently recurring sign for \( \text{nw} \).

A few syllabic signs moreover are often also employed without phonetic addition, thus e. g. t\(^\mathbb{N}\), b\(^\mathbb{N}\), k\(^\mathbb{N}\), s\(^\mathbb{N}\), \( \overline{\text{nw}} \); those derived from substantives then receive a stroke according to § 51.

Note the writing of the words \( \overline{\text{mn}} \) and \( \overline{\text{si}} \): \( \overline{\text{62.}} \) and \( \overline{\text{mn-\( ^\mathcal{N} \)}} \), \( \overline{\text{s\(^\mathcal{N}\)-\( ^\mathcal{N} \)}} \), in which the subjoined \( \overline{\text{\( ^\mathcal{N} \)}} \) is to be inserted within the syllabic sign.*

* according to Sethe.
Since the Egyptian writing was naturally intended only for such as were familiar with the language, the Egyptians omitted much as dispensable, which seemed to them self-evident. Almost all grammatical changes therefore which take place within a word are left unindicated, e.g. $\text{hmwt}$ plur. of $\text{hmt}$ “woman” is written $\text{hmrvt}$ (that is without indication of the $w$). But further, the grammatical endings are also often omitted, where it is supposed that the reader himself will perceive them from the connection: $\text{Hi}$ for the plural $sr(w)$ “princes”, $\text{n}$ for $hmt\ nb[t]$ “every woman” &c.

Further with many phonetically written words a consonant is regularly or often omitted. Note especially the frequently used words:

- for $\text{lf}$ “father”, $\text{f}$ for $\text{sms}$ “follow”,
- for $\text{lht}$ “thing”, $\text{f}$ for $\text{w$sr$}$ “desolate”,
- for $\text{rm$t}$ “man”, $\text{f}$ for $\text{htm}$ “to seal”,
- for $\text{h$p}$ “Nile”, $\text{f}$ for $\text{lnr}$ “stone”,
- for $\text{hr$rd$}$ “child”, $\text{f}$ for $\text{ptr}$ “see”,
- for $\text{smt}$ “land”, $\text{f}$ for $\text{ck$3$}$ “correct”,

for df³ "food", \( \text{for } ssh \) "walk, run", &c.

A. Belonging to the earliest period, but sometimes occurring later also, are: ◇ for \( \text{it } \) "father", ◯ for \( \text{iri } \) "belonging to", also ◯ for \( \text{iwf } \) "flesh".

Here belong also the cases where only its second 65. consonant is added to a triliteral ideogram in violation of § 55, e. g.:

\[ \text{for } \text{stn } \) "king of upper Egypt", \]
\[ \text{for } \text{hk³ } \) "to reign", \]
\[ \text{for } \text{htp } \) "offering", \]
\[ \text{for } \text{wsr } \) "strong", \]
\[ \text{for } \text{shmt } \) "name of a goddess", &c.

In frequently used titles and formulae, still more 66. arbitrary abbreviations occur, like: \( \text{for } \text{hcti } \) "prince", \( \text{for } \text{rphcti } \) "hereditary prince", the benediction \( \text{for } \text{chnh wdn³ snb } \) "living, hale, healthy", \( \text{for } \text{nhh } \) "eternity".

Further, the old divine names, titles &c., which 67. are written with only an ideogram are abbreviations, like: \( \text{for } \text{wp wdn³wt } \) "opener of ways" (a divine name);
Finally, a word which is obvious from the connection, is very often so abbreviated that only its determinative is inserted, e. g. for \[\text{for } k\ddagger t \text{ "labor"},
\[\text{for } n\ddagger t \text{ "strong"}, \text{ for } twt \text{ "statue"} \text{ &c. (For the most important cases cf. the table of signs).}
\]

\[\text{e. INVERSION OF THE ORDER OF WORDS.}\]

\[\text{f. UNUSUAL STYLES OF ORTHOGRAPHY.}\]

Since the m. e. there developed along with the usual writing, a syllabic orthography, which nevertheless was only used for the writing of foreign words, proper names &c. It consists of the syllabic signs
treated in §§ 33—35 and of other syllables in ə and w. The sounds ə and w evidently serve as the approximate indication of the vowels; cf. e. g.  
\[ \text{tw-pə-ərə} \] for the Hebrew רֶפֶל "scribe" &c. The syllables  \[ \text{ɪər₃(?)} \] and  \[ \text{ɪn} \] employed therein, seem to correspond to er and en.

Sportive methods of writing, in which ideograms serve as simple consonants, determinatives and unprecedented signs are used as ideograms, are found as early as the m. e. cf. e. g.  
\[ \text{msdmτ "cosmetic"}, \] wherein  \[ \text{as determinative of ms "child" represents this syllable,  \[ \text{dw "mountain" represents d,  \[ \text{mwτ "mother" the syllable mt. — But this wanton method first attains importance from the fact that such an orthography gradually superceded the old hieroglyphs in the Greek period. — A summary of these signs may be found in Brugsch, Verzeichniss der Hieroglyphen mit Lautwert (Leipzig 1872).}

6. RULES FOR TRANSLITERATION.

The orthography so often leaves the phonetic form of the words uncertain, that a transliteration free from some arbitrariness is impossible. One should accustom himself to the following rules:
1. Since most "s and 's according to §§ 24, 25 had, in the m. e. already become \( \sigma \) and \( \varepsilon \), in texts of the m. e. and n. e. \( t \) and \( d \) should always be transliterated in cases of doubt, and \( t \) and \( d \) only employed when \( \varepsilon \) and \( \sigma \) are actually written out. Hence \( \text{R} \) \( ntr \) but \( \text{R} \) \( ntrt \).

2. In the case of omitted consonants (§§ 64, 65) and grammatical endings (§ 63), only those should be supplied which occur in parallel cases really written out, and rather too little than too much should be restored. Hence \( \text{R} \) \( \text{mi} \) according to § 133 \( \text{im} \), but \( \text{R} \) \( \text{mi} \) only \( \text{imt} \) (not \( \text{imit} \)).

3. Words in which the order of consonants changes (§ 29, 30) should be written, when in doubt, with the form in which they oftenest occur. Hence \( \text{R} \) \( \text{im}^3 \) and only \( \text{im}^3 \) \( m \) when this reading is phonetically written out.

4. In compound words the component parts should be separated by a hyphen: \( \text{R} \) \( \text{ms-sw} \) "Ramses".

PRONOUNS.

1. THE PERSONAL PRONOUN.

a. PERSONAL SUFFIXES.

*73. The personal suffixes, which are subjoined to the noun, the prepositions and the verb, to express pos-
session or the subject (e. g. *pr-k* "thy house", *hr-k* "upon thee", *sdm-k* "thou hearest"), according to the classic orthography are:

Sing. 1 c. ḫ i (ḅṣ, ḫ) Plur. 1. c. ḫ ḫ ḫ

2 m. ꞉ k

f. ꞉ t (☉)

3 m. ꞉ ꞉ f

f. ꞉ (☉) s

They are written *after* the determinative of the word to which they are subjoined, e. g. ꞉ rdk (copt. *paltet*) "thy foot", ꞉ mrk "thou lovest".

The suff. 1 sg. is according to the Coptic an ḫ 74. (e. g. ḫω "my head"); in the o. e. it is always left unindicated, e. g. ꞉ ꞉ ẓw[t[i] "my office", from the m. e. down it is mostly indicated by determinatives, e. g. ꞉ ꞉ or ꞉ ꞉ or ꞉ ꞉ according as a man, a woman or a god speaks, read sʒ[i] "my son". Nevertheless it is sometimes left unindicated here also, especially in the *n*-form of the verb (cf. § 194).

A. The pyramids aways write it ꞉, and this writing occurs as an exception later also.

B. After consonants the suffix later falls away (e. g. copt. *paltet* "my foot" cf. C 5).
75. In the m. e. ț of the 2 sg. f. and 2 pl. already passes over into ă ț; nevertheless ț and ă are often written later also.

B. Late writings of the 2 sg. f. are ă ș and ă; in Copt. this suffix has lost the ț (-E), cf C§ 50.

76. The 3 m. sg. is sometimes and the 3 f. sg. often used for the neuter "it", e.g. ą ĕhrs “on account of it”; the 3 f. occurs even for more than one person, where we would expect the 3 plur.

77. The suffixes of the dual were early superceded by those of the plural, nevertheless ă țîmîtw-sni “between them both” is still to be found.*

A. The pyramids have 3 du. țî tni, 2 du. țîtni.

78. On the other hand the suffixes of the singular, when they are subjoined to a noun in the dual or having the dual meaning, very strangely take the dual ending i, though it is not always written out, e.g. ĝwîfi “his two arms”, sptwîki “thy two lips”, wcrîfi “his two legs”, snnwîfi “his second”.

A. The pyramids write such a suffix ğț țfî.

79*. These suffixes are not used as object. Nevertheless as possessive suffixes attached to infinitives (e. g.

* Todtb. 7, 5.
1. THE PERSONAL PRONOUN. b. THE OLD ABSOLUTE PRONOUN.

hr ithhk “when they draw thee” lit. “at thy drawing”) they represent the object to our grammatical sense and the Egyptians themselves later conceived them as such.

B. Since the forms of the copt. verb are mostly made with the infinitive, these suffixes have therefore become real object suffixes in Copt. (cf. C $174$).

b. THE OLD ABSOLUTE PRONOUN.

Its forms, which externally at least are identical* with the suffixes in the plural, are:

Sing. 1 c. n Plur. 1. c. n

2 m. tw, tw 2. c. tn tn

f. (tm or tn?)

3 m. sw 3. c. sn

f. si

Neutr. 3 c. st

They are still employed as subject, almost only in a certain few cases (cf. §§ 166, 328, 369, 383), on the other hand regularly as object.

The 1 sg. is written in the o. e. The 2 m. tw and the 2 pl. tn in the m. e. are already tw and tn.

—The 3 f. is of course always to be read si, even when the \ is not written.
A. The pyramids write the 1 sg. \( \text{\textbullet} \). For the 2 m. they have two forms \( tw \) and \( kw \), and for the 2 f. \( tm \) and \( tn \).

*82. The form \( \text{\textbullet} \) st perhaps originally belonged to the 3 f.; but it is nevertheless regularly used, from the time of the m. e. down, for neutr. "it". It is used with decided preference and may even refer to a number of persons (cf. § 76); the pron. 3. pl. sn is almost entirely superceded by it. Cf. e. g. Gnnsn st "they turned themselves (lit. "it") about".

83. Along with the above, the pyramids have also further forms of these pronouns which they employ with special emphasis, like 1 sg. \( m\text{\textbullet} \), 2 m. \( tw\text{\textbullet} \), 2 f. \( tm\text{\textbullet} \), 3 m. \( sw\text{\textbullet} \), 3 f. \( stt \). Of these, only \( \text{\textbullet} \) swt is still to be found in the m. e.

c. LATER ABSOLUTE PRONOUN.

*84. These forms are only employed as emphatic subject, and correspond to the emphasizing of the substantive by means of \( in \) (cf. § 350). They are:

Sing. 1 c. \( \text{\textbullet} \) inwk

Plur. 1 c. ?

2 m. \( \text{\textbullet} \) ntk

f. \( \text{\textbullet} \) ntt (later ntt)

3 m. \( \text{\textbullet} \) ntf

f. \( \text{\textbullet} \) nts

2 c. \( \text{\textbullet} \) nttn

(later nttn)

3 c. \( \text{\textbullet} \) ntsn
As may be seen, the 1 sg. is an exceptional form, the others consisting of a little syllable nt- (cf. § 103) and the possessive suffixes.

A. In the pyramids they are still rare.

B. There is later an inclination to write the 1 sg.,  

From these forms the copt. pronouns have descended, cf. C§ 51.

d. THE EXPRESSION FOR "SELF".

The word  with the suff. means "self", e. g.  

"myself",  "thysel",  "himself" etc.

B. The word hc "body" with or without suff. occurs rarely for "self"; this expression, from which the copt. descends (cf. C§ 52), later becomes more frequent.

2. DEMONSTRATIVE PRONOUNS.

a. FORMS WITH MASC. p-FEM. t-

The most common demonstrative "this", is:  

Sing. m.  

Plur. m.  

The plural forms are, in the m. e., already obsolete, and are replaced by nn (cf. § 91). — It always stands after the substantive:  

"this house",  

In cere-
monious language it also follows proper names of persons, especially in direct address.

A. The pyramids use it with especial emphasis before the substantive also; m pn gs "on this side".
B. In n. e. it is almost entirely lost.

87. The weaker word for "this" (following its noun) pw, occurs almost only in this one form and then only
1. in the cases in §§ 237, 239, 334;
2. in ceremonial address: Ppy pw "o Pepy!"
3. in apposition; mw-n-Si, ḫḥ３ pw n Tnw "mw-n-Si, the prince of Tnw" (lit. "this prince").
A. In the pyramids it still survives: sing. m. pw (also p, p?), f. tw; plur. m. ipw f. iptw.
B. In the later language it is entirely lost.

88. In the archaic language m. \( \text{pw} \), f. \( \text{tw} \) also occur, and are properly perhaps identical with the old pw.

89. The old word for "that" is sing. m. \( \text{pf} \), f. \( \text{tf} \) (properly pf3? tf3?), which is also later written \( \text{p3f} \). It follows the substantive and often adds an implication of despicableness.
— The plur. is replaced by nfr, cf. § 93.
A. The pyramids have also the plural ipf and also place it (like pn § 86.A) before the substantive.

90. The usual later demonstrative is sing. m.
p3, f. t3, which, differing from the others, is always placed before the substantive: p3 šf/dw "this book". — It is also used as a substantive (p3 pw Wsir "this is Osiris") and then has also a plural, q:. — Usually the plural is replaced by n3, cf. § 94.

A. In the pyramids p3 does not occur.

B. The article is later developed from p3, cf. § 113; the later demonstrative also p3i c. ΠΔι (C§ 58) is descended from p3.

b. FORMATIONS WITH n-.

nn is properly a substantive, "this": 91.*

ddnf nn "he said this"¹. — But it is for the most part connected by the genetive n with a following singular or plural: nn n šhti "these peasants"² (lit. "this of peasant"); this combination replaces the plural of pn (cf. § 86).

B. Later the genetive n falls away: nn ( ) l3dt "these nets";³ in LE the word is lost. — and are incorrect writings for nn.

(older ) nw is used precisely like 92.* nn; as a substantive it means "this", in nw n . . . it

¹ Sin. 32. ² Bauer 75. ³ Westc. 5, 12.
replaces the plural of pw (cf. § 87): \( Nw n ntrw \) "These gods". It is more archaic than \( nn \).

B. In LA it is lost.

93. \( n3 \) in the same way replaces the plural of \( pf \), e. g. \( nf3 n \varepsilon \varepsilon \varepsilon \) "those swellings(?)".

*94. \( n3 \) "this" is also a substantive, "this"; in the combination \( n3 n \) with following plural, it serves as the plural of \( p3 \) (cf. § 90, 113), e. g. \( n3 n \varepsilon \varepsilon \varepsilon \) "these wicks".

A. To the pyramids \( n3 \) is still unknown.

B. Here also the genetive \( n \) falls away in the n. e.; hence the article is for the most part \( n3 \), cf. § 113 B.

**Nouns.**

1. **Substantives.**

   a. Expression of Gender.

   *95. The masculine and feminine are distinguished. The feminine has the ending -\( t \) and denotes

     1. the naturally feminine;
     2. various inanimate objects, which are conceived as feminine, like \( nst \) "throne", \( wGrt \) "leg";

---

1 Eb. 2, 5.  2 Eb. 108, 20.  3 Siut I, 297.
3. Collectives, like 𓊡𓊣“multitude”, ḫryt “humanity”;
4. Expressions in the neuter, like 𓊣“that which”, and the like;
5. Abstract conceptions, like 𓊡“kingdom”, 𓊣(? ) “evil”.

The masculine originally had an ending 𓊦, which 96. was denoted by 𓊦. It is nevertheless only rarely written, chiefly

1. with divine names etc.: 𓊦 𓊡𓊣 Anubis, 𓊣 Month, 𓊡𓊣 Chnum.

2. with substantives which denote a person and are derived from an adjective or verb: 𓊣𓊣“pauper” (from 𓊦 𓊣“poor”), 𓊣𓊣“follower” (from 𓊣𓊣“follow”)
cf. also §§ 282, 292, 258, 395.

3. with various substantives like 𓊣𓊣“stream” (pronounce *jotru, c. 𓊣𓊣), especially also those with 𓊦 like 𓊣𓊣“jar”, 𓊣 “interior”.

A. In the pyramids this ending is still more frequent.
B. In the n. e. the ending was probably already lost.

The ending of the feminine, -𓊦, is always written, 97.
and only disregarded in abbreviations (like  for ḫt ntr “house of god”). — The collective rmtt “humanity”, which seems to have superceded the plural of rmt “man”, is written almost without exception.

B. From the n. e. down, the feminine ending loses its t, and feminine substantives end in ē or a long vowel (cf. C§61). Hence the fem. ending is often omitted in the n. e. or added in the wrong place.

98. The names of foreign lands, like ḫrr “Ethiopia” are treated as feminines, although they do not have the feminine ending; probably because smt “foreign land” is understood with them.

99. We perceive from the Copt. that the noun possessed various definite formations (cf. C§63 seq.); but these are not to be recognized in hieroglyphic orthography, because they are for the most part distinguished only by different vocalization. E. g.  sm = *sim (CIM) “herb”,  rēc = *rēc (PH) “sun”,  rēn = *ran (PAN) “name”,  irp = *iērp (HPR) “wine”,  dnh = *denh (TNē) “wing”,
grḥ = *gôrḥ (Δωρσ) "night"; spr = *spîr (Σὶρ) "rib"; snf = *snof (Σνοφ) "blood"; twt = *twn̄ (Τωντ) "statue, figure".

A large number of substantives is derived from others by the ending i; this ending is probably identical with the adjectival ending of § 132. The old writing of this ending, i, is found later only in proper names, like ḫρī "the one belonging to Horus" (German "der Horische") from ḫr "Horus". In most cases these words have taken on a peculiar form in their orthography: in the o. e. they end in m. ṃ, f. ṃt (pronounce u̯, u̯t?), in the m. e., in m. y, f. yt. So e. g.:

dnɔm ntr "morningstar";

imɔhw "revered";

mrwt "love".

On the other hand, with the numerous substantives in m. ī, f. yt, the question seems rather one of an i belonging to the stem, than of an ending; in the older period the ending of the masculine is in most cases not written:  "sand" (Ωώ),
1. Substantives. b. Forms of the substantive. 102. 103.

A number of substantives is derived from verbs by means of a prefixed \( m \). Since the m. e. this prefix is written preferably with the syllabic sign \( m \) (cf. § 35):

\[ \text{mh}^3 \text{t} \text{ "scales" (from } \text{h}^3 \text{ "measure"}, \]

\[ \text{msdmt} \text{ "eye cosmetic" &c.} \]

103. Note further the prefix \( \text{n}t- \), which is used (like the German "... wasen"), to express the nature or practice of that to which it is prefixed (\( \text{nt-hsb} \) "Rechnungswesen"); and the expressions, made with \( \text{bw} \) "place", for abstract ideas (\( \text{bw nfr} \) "good place" i. e. "the good"). — A remarkable form is the frequently recurring \( \text{wn m}^3 \text{c} \) (properly, probably: "it is true"), which is used like a substantive "truth".

A. The prefix \( \text{ti} \) "belonging to" is entirely obsolete; it is nevertheless found in the title \( \text{ti-sw} \) "the one belonging to him", i. e. follower of the king.
c. EXPRESSION OF NUMBER.

α. PLURAL.

Apart from the ending, the plural is orthographically indicated:

1. by a threefold writing of words written with an ideogram: \( ntrw \) "gods", \( prw \) "houses", \( nwt \) "cities" (archaic, but still retained with some words).

2. by threefold writing of the determinative: \( hcliw \) "princes" (obsolete).

3. by means of \( \text{III}, \text{I} \), (more rarely \( \text{O}, \text{O}, \text{O} \)), which follows the ideogram standing alone: \( hhw \) "millions", \( ntrw \) "gods" (abbreviation of 1.).

4. by means of \( \text{III}, \text{I} \), which follows the determinative: \( srw \) "princes" (abbreviation of 2.).

A. There is often found in the pyramids also the threefold repetition of phonetic signs, e.g. \( df3w \) "victuals", \( hkw \) "charm", \( mw \) "monument"; they also put \( \text{O}, \text{O}, \text{O} \) after purely phonetic writings: \( ikwv \) "excellent" (pl.). Such writings also occur sporadically later.

The plural of the masculine ends in \( n \) (about 105*).
like -placeholder cf. C§ 109 seq.), which is consistently written in good manuscripts, e. g.  

Note especially:

1. The  is, for the most part, not written with words which contain no phonetic signs, so  "heads",  "gods",  "rulers".

2. With words which in the singular already end in , the  of the plural is not written out:  

3. The adjectives in  (cf. § 133) take plural ending,  , those in  write it with the sign  

4. On the plural of  cf. § 97; that of  "king of upper Egypt" has the form  

B. In the n. e. there are also plurals in  ; that of the adjectives in  ends later in  

106. The plural of the feminine ends in  (*-wet, cf. C§ 109, 116 seq.), e. g.  

1 Eb. 58, 12.
1. Substantives. c. Expression of Number. β. Dual. 107. 108. 43

(from nḥbt), [], [] rnpwt “years”¹ (prépnoyn). from rnp t pōme ), [], [] cšwt “swellings(?)”²
(from [], cšt) &c. In classic orthography these endings are nevertheless rather seldom written, [], [] being usually written for hmnwt “women” &c.

β. Dual.

The dual is orthographically indicated: 107*. 1. by the repetition of the sign, with words written with only an ideogram: — tšwi “the two lands” mrš(?) “the two eyes”. — In this case the ending is not written.

2. With other words the determinative is repeated: thšwi “the two obelisks”, cšš “the two members”, mnti “the two legs”. — The ending is written for the most part.

Just as there is a determinative, III, in the plural, 108. by which the threesfold writing of the ideogram or determinative is avoided, so also in the dual there was a corresponding sign, || or \, which is still used as a determinative in the oldest texts, e.g. or

¹ Grave in Assuan. ² Eb. 108, 19.
γ. USE OF THE SINGULAR, PLURAL, DUAL. 110. 111.

The singular is often employed collectively, where we expect the plural, especially where "every" is subjoined to the substantive, e.g. "600 men (selected) from "from all the brave".

111. Differently from our conception of it, the plural is used:

1. with abstract nouns, e.g. □ □ □ □ ḥw

1 LD Η 122 b.
1. SUBSTANTIVES.  

d. THE ARTICLE. 113.

“time”,  \( t3w \) “heat”,  \( fkJ3w \) “reward” &c.

2. with names of material e.g.  \( mw \) “water”,  \( irpw \) “wine” &c.

But plurals of this sort are early treated as singulars also (e.g.  \( mnw \) “monument”,  \( hrvw \) “height”,  \( mw \) “water”). — With words of material, which, like the names of the metals, are used in the singular, the plural denotes separate pieces of the material; e.g.  \( nb \) “gold”,  \( nbw \) “gold nuggets”.

The dual is only used of persons or things in pairs. It early became extinct; cf. C§ 121.

d. THE ARTICLE.

The older language has no expression known to us for the definiteness or indefiniteness of a substantive, and the popular language of the m. e. first begins to employ the demonstrative \( p3 \) (cf. § 90) as an article. The forms are:

Sing. m.  \( p3 \), f.  \( t3 \).

Plur.  \( n3 \) (“the of . .”) with following singular or plural.

B. Since the m. e.,  \( n3 \) with following plural is written instead of  \( n3 \). — cf. C§ 112 sq.
114. This popular language of the m. e. further, regularly omits the article with certain words. These are 1. the names of all parts of the body, 2. many designations of localities, 3. the expressions of the cult and the kingdom, 4. a few words occurring with especial frequency.

115. In the later language, the expression $\text{p}_3\text{yf} \ "\text{his}"$ (lit. "the his") copt. $\pi\omega\text{q}$ (cf. C§ 54), originates from the combination of the article with the possessive suffixes. Before a substantive it denotes the possessive relation and replaces the possessive suffixes (cf. § 73) in all cases, where the article would be used, e. g. $\text{p}_3\text{yf} \text{pr}$ (really "the his house") for $\text{prf} \ "\text{his house}"$. The feminine is $t_3\text{yf}$, the plural $n_3\text{yf} \ n \ldots$

B. In the n. e. the plural is $n_3\text{yf}$; in Copt. this is the "possessive article" $\text{NEq-}$, $\text{TEq-}$, $\text{NEq-}$ (cf. C§ 55).

116. The later "indefinite" article also, does not yet exist in the popular tongue of the m. e.; the combinations $\text{w}_c\text{w} \ n \ldots "\text{one of} \ldots \text{", (masc.) } \text{w}_c\text{t} \text{nt} "\text{one of} \ldots \text{” (fem.) still mean “any”.

B. The indefinite article $\text{w}_c$ copt. $\text{OY}$ (cf. C§ 122) grew out of this $\text{w}_c\text{w} \ n$ in the n. e.
**e. THE ABSOLUTE SUBSTANTIVE.**

The substantive stands absolutely: 1. very often for designation of *time*, e. g. \(\overset{\circ}{\text{tr}}\) \(\overset{\circ}{\text{nr}}\) "at the time of", \(\overset{\circ}{\text{rc}}\) \(\overset{\circ}{\text{nb}}\) "every day" (lit. "every sun"), \(\overset{\circ}{\text{r}}\) \(\overset{\circ}{\text{npt}}\) \(\overset{\circ}{\text{4}}\) "in the fourth year".

2. for designation of *place* in expressions like \(\overset{\circ}{\text{bnt}}\) "in front", \(\overset{\circ}{\text{mht}}\) "northern".

3. in expressions with *sp* "time": \(\overset{\circ}{\text{spw}}\) \(\overset{\circ}{\text{4}}\) "four times".

Here also, belong the numerous cases where a substantive follows an adjective in order to specify that to which the quality of the adjective refers: \(\overset{\circ}{\text{ikr}}\) \(\overset{\circ}{\text{shrm}}\) "excellent in plans".\(^1\)

**f. APPPOSITION AND COORDINATION.**

In an apposition, the substantive explaining stands after the one explained. The following peculiar cases are important:

1. it specifies material: \(\overset{\circ}{\text{hdr}}, \overset{\circ}{\text{krs}}\) "white stone, a sarcophagus", i. e. a sarcophagus of white stone;\(^2\)

2. it specifies locality: \(\overset{\circ}{\text{Tni}}(?)\)

\(^1\) Sin. 49. \(^2\) Una 5.
3bdw "Thinis, Abydos", i.e. Abydos situated in the nomos of Thinis;

3. it specifies number and measure: \(\text{hkt hby} 22 "\text{Beer, 22 jars}"\), i.e. 22 jars of beer\(^2\); \(\text{hsb, rmt} 600 "\text{number, 600 men}"\), i.e. a number consisting of 600 men.

120. In a series of coordinated words, they are usually left unconnected: \(\text{hmwt j3yw "women and men"}\). Things which are to be closely connected (\(\text{dC hr hwy}\) "storm and wind") are joined by the preposition \(\text{hr}\), while the preposition \(\text{hn}\) permits each of the connected words to stand forth individually (\(\text{hr} \text{hn} \text{mwtf "his father, as well as his mother"}\)).

A. The pyramids coordinate also by means of the particle \(\text{ist}\), which comes after the words to be connected.

121. The expression for "or" \(\text{r-pw (older \(\text{r}\))}\) comes after the words to be separated by "or": \(\text{m nb, m sn, m hnm s r-pw "as lord or as brother or as friend"}\). In rare cases \(\text{r-pw}\) is repeated after every word.

---

g. THE GENETIVE.

a. DIRECT GENETIVE.

This older kind of genetive is apparently expressed only by the position of the two substantives, in which the governing word stands before the governed: 

\[ pr \ imm \] “House of Amon.” The connection between the two words is for the most part so loose, that they may be separated, e. g. 

\[ n \ hw \ is \ pw \ hr-ct \] “but they are not things of the prince’s house”\(^1\) where the genetive \( hw \) \( hr-ct \) is divided by \( is \) \( pw \).

On the other hand, in other cases the two words in the combination cannot be separated, and are treated as a compound word, e. g. 

\[ mr-shtn \ mn \] “an excellent overseer of peasants”\(^2\).

B. This last case persisted down into the Copt. (cf. C§ 140); the Coptic forms show that the former of the words so joined suffered shortening, as in the analogous form of the Semitic “status constructus”.

The direct genetive is especially preferred:

1. After general designations of locality:

\[ Siut \ I, \ 288. \]
\[ 2 \ Sin. \ 244. \]

Erman, Egypt. gramm.
b. INDIRECT GENETIVE WITH $n$. 125.

It is formed by means of an adjective *$ni$, which, according to § 135 means something like "belonging to"; "the priest belonging to Amon" for "the priest of Amon". This adjective agreed in gender and number with the noun to which it belonged; its forms, according to classic orthography, are:

---

1 Sin. 78.
Sing. m.  \( \text{n} (*ni) \) f.  \( \text{nt (*nit)} \),

Plur. m.  \( \text{nw (*niv)} \), f.  \( \text{nt (*nivt, cf. § 106)} \).

A. The old writings are: sg. m.  \( \text{nì} \) (in the m. e. once also  \( \text{nt} \)), ¹ pl. m.  \( \text{nw} \). In the older period there was further a dual m.  \( \text{nwì} \).

B. This word early lost its inflection; it first lost the dual, then (already in the popular language of the m. e.) the plural, and also the feminine. Since the LE,  \( \text{nì} \) became an unchangeable particle, like Copt.  \( \text{nì} \); cf. C. § 141.

The indirect genetive must be used:

1. to designate a part:  \( \text{tpì nì şmwf} \) “the first of his harvest,” ²

2. to designate material:  \( \text{htp ñì şst} \) “a great offering tablet of alabaster.” ³

3. to subjoin that which will more nearly define the noun, where we would often employ an adjective:  \( \text{mùì nì 3000} \) “an army of 3000,” ⁴  \( \text{dìnì Kblìn} \) “the city of Coptos,” ⁵  \( \text{s nì mùìt} \) “a man of truth”. ⁶

¹ LD II, 138d.  ² Siut I, 310.  ³ Una 43.
2. ADJECTIVES.

a. ADJECTIVES WITHOUT ENDING.

128. These adjectives, perhaps derived from verbal stems, had various forms also common to substantives (cf. § 99) e.g.:

1.  nfr “good” *nôfr (NOYQE), bin “bad” *bôīn (BOWN), nam “sweet” *nôdm (NOYTÔ).

2.  wr “great” *wêr (-OYHR).

3.  nb “every” *nib (NIM).

---

1 Eb. 75, 13. 2 Una 46.
They follow their substantive and agree with it in number and gender:

- hkt ndmt “sweet beer”¹
- dbnw ḫṣḏw “many ten thousands”²
- ḫwt nbwt hwmt (?) “all bad things”³
- ḫnṯi wrt “two great towers”⁴

Nevertheless most texts are not exact in the writing of these endings, self evident of course to the Egyptian reader; the ending of the sing. fem. is often wanting, that of the plur. fem. always, and for the most part the sign also.

B. Most adjectives later become unchangeable (cf. C§ 147); the plur. fem. was first lost, being replaced by the plur. masc. Of nb “every” only the fem. survives.

Rarer combinations of the adjective are:

1. it forms one word with the substantive: ḫḏ-sn “their white bread”⁵ Cf. C§121, 1.

2. The possessive suffix of the noun is repeated with the adjective: ḫḏ-sf wrf “his great son”.⁶

---

b. ADJECTIVES IN Ⅰ. 131—133.

131. It is employed also as a substantive, e. g. ἡθείος ἄρσης "the great one", ιερόστος "beauty" (Plural according to § 111, 1).—On the employment of the adjective as predicate and its ending ἡ cf. § 331. On the employment of the adverb cf. § 300.

b. ADJECTIVES IN Ⅰ.

*132. They are all derived from substantives or prepositions by means of an ending, which is written with ι and in Coptic has the sound of e; if the adjective is derived from a feminine, there arises a final syllable, τι, from the junction of the feminine ending -τ and the ι of the adjective.—As may be seen from the Copt. this ending was accented, cf. C§ 93.

*133. This ending ι is only written, where it really forms the end of the word, that is only in the sing. masc.:

Sing. m. \( (i) \), derived from fem. \( (ti) \)
f. \( (it) \) " " " \( (tict) \)
Plur. m. \( (iv) \) " " " \( (tiv) \) (cf. § 43. 61.)
f. \( (iwit) \) " " " \( (tiwit) \).

In the o. e. the ι was left unindicated even in the sing. masc. and such writings are often found in later texts also.—Thus:
b. ADJECTIVES IN ʔ. 134.

irdi "existent at"  hnti "existent before"

Sing. m.  ꜃,  ꜃  ꜃,  ꜃
f.  ꜃
Plur. m.  ꜃  ꜃  ꜃
f.  ꜃  ꜃

A. The Pyramids write ꜃ for  i,  ꜃ ꜃ for ꜃, and  ꜃ for ꜃ (according to § 104a).

B. In the m. e. ꜃ already occurs incorrectly for the sing.

; in the n. e. the plur. masc. is also written ꜃ and ꜃ or ꜃  ꜃. A confusion between ꜃ and ꜃ begins in the n. e. also, since they were pronounced about alike according to § 97 B.

Since the adjectives derived from feminine substantives were identical in form with the dual of these substantives (e. g. from nt "city"; nti "urban", and nti "two cities"), such duals, in the oldest orthography, are often written for the corresponding adjectives:

ntr ꜃ ꜃ ꜃ ꜃ ꜃ ꜃ "urban". A few such writings occur later also; note: ꜃ ꜃ ꜃ ntr nti "the urban (i. e. native) god", ꜃ ꜃ or ꜃ ꜃ "Horus dwelling in the horizon."
Those adjectives which are derived from a preposition, like:

- \textit{im\textbar} “existent in” (from \textit{m}),
- \textit{ir\textbar} “existent at” (from \textit{r}),
- \textit{hr\textbar} “existent upon” (from \textit{hr}),
- \textit{hr\textbar} “existent under” (from \textit{hr}),
- \textit{tp\textbar} “existent upon” (from \textit{tp}),
- \textit{hn\textbar} “existent before” (from \textit{hn\textbar}),
- \textit{n\textbar} (cf. § 125) “belonging to” (from \textit{n}),
likewise a few others, like:

- \textit{iw\textbar} “not being” (Copt. \textit{\textbar}$\text{-},$ cf. C§ 89),
- \textit{m\textbar} “being like”,
- \textit{m\textbar} “north of” &c.

very often govern a following substantive or personal suffix (like the prepositions etc. from which they are derived), e. g.

\textit{im\textbar lbf} “the one (fem.) existent in his heart”\textsuperscript{1},
\textit{ir\textbar ct} “belonging to the house”\textsuperscript{2}.

\textsuperscript{1} LD III, 24d. \textsuperscript{2} Louvre C 172.
ADJECTIVES IN § 136, 137

One supervising (lit. "over") secrets".

"resembling him".

All that is stated in §§ 129, 130 concerning the adjectives without ending, is valid also for the adjectives in i, cf. "the priests serving in their times" (lit. "existent in their times"), smwt mhtíwt "northern lands", gssn hri "their upper side" likewise gs hri-sn "their upper-side".

Very frequently they are employed like a substantive, e. g. "those existent upon the sand" (i. e. the Bedouins), "the interior of an onion (?)", mltívk "one like thee" (with masc. substantive ending according to § 96, 2).

In this manner many new substantives originated, especially those in i; e. g. "enemy"

1 Mar. Ab. II, 24. 2 LD II, 149e. 3 Siut I, 311. 4 Sin. 72. 5 LD III, 24d. 6 Eb. 70, 4. 7 Una 13. 8 Eb. 35, 16. 9 Prisse 5, 13.
c. Appendix (irī, imy, ns).

138. The following remarkable unchangeable expressions are probably descended from adjectives:

1. \( \text{i} \text{rī} \text{i} \text{rīw} (?) \) “belonging to, corresponding to” (properly probably the adjective \( \text{i} \text{rī} \)) in expressions like

\[
\text{m i} \text{swī i} \text{rī} \text{ “as corresponding reward, as reward therefor”},
\]

\[
\text{m st i} \text{rī} \text{ “in the corresponding place, in proper condition”}.
\]

2. \( \text{n} \text{f imy} \) “belonging to him” with changeable suffix, e. g.

\[
\text{wr nsn i} \text{my “the oldest one belonging to them, the oldest of them”}.
\]

139. On the other hand the word \( \text{ns} \), which we also often translate “belonging to”, is really an old verb and in the old language is still construed as such, e. g.

---

1 LD III, 24 d.  
2 Prisse 13, 11.  
3 Westc. 9, 11.
3. NUMERALS. a. REAL NUMERALS.

The numeral figures are:

1 units, \[\text{thousands},\] 
\[\text{tens},\] 
\[\text{hundreds},\] 
\[\text{hundreds of thousands}.

The greater number precedes the less:

\[\text{12,635.} \]

In dates the units are indicated by horizontal strokes (—, || &c.)

In so far as they are known, the numerals run 141, thus:

1 \(\nu\) 2 \(sn\) 3 \(hmt\) 4 \(fdw\) 5 \(dw\) 6 \(sls\)

---

1 Mar. Cat. d'Abyd. 999. 2 LD III, 24 d. 3 Peasant 16.

7 sfh 100 $\beta\gamma$
8 $\beta\mu\nu$ 1000 $\beta\gamma$
9 $\rho\sigma\delta$ 10000 $\delta\beta\gamma$
10 $\mu\tau$ 100000 $\h\nu\eta$

Of the tens, 30 is $m\epsilon\beta\gamma$; for the others the plural of the units was used. Cf. C§ 157.

*142. The numeral follows the noun and the latter is for the most part in the plural: stnyw 3 "three kings." On the other hand the noun stands in the singular:

1. with the numeral 2, mb$\beta$ 2 "two ships";
2. in specifications of measure and time, also in accounts, rnpt 110 "110 years", mb 4 "4 ells".

A. The pyramids treat the numeral as a substantive, and subjoin to it the numbered word as an apposition: fdw$\nu$ ipw $n\tau\rho\nu$ "these his 4 gods", (lit. "these his four, the gods"). This construction has been preserved in the expression rnpt 5 hr$\nu$ w "the five, the ones upon the year", i. e. the 5 intercalary days.

B. In LE the numeral precedes the noun, which is for the most connected by $n$; only in the specifications of an account and with the numeral two, does the old construction remain. Cf. also C§ 162 sq.

143. The numeral $\mu\nu$ "one", which is mostly writ-
ten out, agrees with its noun in gender: $\frac{\text{ten}}{\text{one year}}$; the other numerals perhaps did the same.—On $\text{ten}$ cf. § 116.—By placing $\text{ten}$ before an adjective or verb, its meaning is rendered superlative: $\frac{\text{ten}}{\text{the only excellent}}$.

The numerals are also used as substantives: 144. $\frac{\text{m thousand of bread}}{\text{m thousand of bread}}$.

The **ordinal numerals** are formed by the ending 145*. $\text{nw: snnw} \quad \text{"the second"}$, $\text{hmnw} \quad \text{"the third"} \& \text{c.}$; they may precede or follow their noun; “first” is supplanted by $\text{tpi} \quad \text{"the only excellent"}$ (cf. § 135), which, as an adjective always follows its noun. They are all used as substantives also.

A. In the pyramids the ordinal numbers are entirely written out; in like manner $\frac{\text{snnw}}{\text{the second}}$ is later, still found.

B. They are early supplanted by a circumlocution with $\text{mh} \quad \text{"fill up"} \quad \text{("that which fills up three")}$; cf. also C§ 165.

b. APPENDIX TO THE NUMERAL.

The probably dual word: m. $\frac{\text{kt}}{\text{ky}, \quad \text{f.}} \quad 146$. $\text{kt} \quad \text{(for ktl) "the other"}$ is construed like the numerals in the pyramids (cf. § 142 A):

\[1\text{ Una 47.}\]
ky gsw "another salve", 1
ktyf mb "his other way". 2

The real plural of the word is kw (the first \ is the old determinative of the dual); more frequently a circumlocution is used for it kt-hy "another body" and kt-hy "another thing", i.e. others.

147. The substantive tnv "number", with following plural or singular means "every"; cf. tnv b'stn "every one of their revolts" 3 (lit. "number of their revolts").

THE VERB.

1. IN GENERAL.

a. THE CLASSES OF THE VERB.

a. USUAL CLASSES.

148. The verbs are divided into various classes, according to the number and character of their consonants, the so-called "radicals". These classes differ in manner of inflection, and how considerable these

---

1 Eb. 26, 13. 2 Butler 15. 3 Una 28.
differences were, may still be seen from the forms of the verb preserved in Copt. cf. C§ 185 sq. The designation of these classes is that common to Semitic grammar.

The most common class is that of the bi-literal 149*. verbs (abbrev.: II lit.) as e. g. ೓ wnn “to open”, ೓ mh “fill”, ೓ ℓd “build” &c.—They retain their consonants in all forms unchanged. Cf. C§ 186 sq.

The verbs “secundae (radicalis) geminatae” (II ae 150*. gem.) are properly triliteral verbs having the last two radicals alike e. g. ೓ wnn “to be”, ೓ kmm “become black”, ೓ ℓb b “become cool”, ೓ ℓ mss “see”. But as these similar radicals fall together where they are not separated by a full vowel, in most forms they resemble the biliterals (wn, km &c). Cf. C§ 199.

The very numerous verbs “tertiae infirmae” (III ae 151*. inf.) have as third radical an i or ֫, which nevertheless is visible only in certain forms: ೓; in most cases they show only the first two radicals or double also the second: ೓ mr, ೓ mrr.—e. g. ೓ mr “love”, ೓ ms “bear”, ೓ ℓ pr “go out”,
\( h^3 \) "descend". Cf. C§ 213.—The frequently recurring verb \( i^n \) "make" writes the forms \( i^n \) and \( i^ny \): \( \rightarrow \) and \( \rightarrow \); on the other hand the form \( i^rr \) is written \( \rightarrow \).

A. With a part of these verbs the third radical was originally \( u \) or \( w \) which as a rule became \( i \) or \( v \).

*152. The triliteral verbs (III lit.) like the II lit. (§ 149) have the same consonants in all forms, e.g.  
\( \text{cnh} \) "live",  
\( \text{csh} \) "rescue",  
\( \text{sp} \) "load". Cf. C§ 200 sq.

153. The verbs "tertiae geminatae" (IIIae gem.), which correspond to the II gem. (§ 150), and the verbs "quartae infirmae" (IVae inf.) which correspond to the IIIae inf. (§ 151), as a rule are not to be distinguished. Both double the third radical in certain forms (\( \rightarrow \) \( spd \) "prepare": \( \rightarrow \) \( spdd \); \( \rightarrow \) \( sps \) "be revered": \( \rightarrow \) \( sps \)); only isolated examples in which an \( i \) is written out (\( \rightarrow \) \( spsi \)), can be safely classed with the IV ae inf. Cf. C§ 227.

154. The quadriliteral and quinqueliteral verbs (IV lit. and V lit.) correspond to the II lit. and III lit. and like these, their consonants remain unchanged. They
are mostly derived from II lit. and III lit.: □

hmhm "low, roar" (from *hm),

nhmh (from nhm). According to the Copt. the IV lit. and V lit. seem to have had the same form (cf. §§ 224, 226).

**RARE CLASSES AND IRREGULAR VERBS.**

Beside these ordinary classes there are apparent-155. ly other, smaller groups, which, however, cannot be distinguished with certainty; e. g. the frequently recurring verbs dād "say" and nādr "strike" present many points which distinguish them from other II lit. and III lit. — Moreover, within the above contrived classes, further subdivisions exist, by reason of the special phonetic character of one of the radicals.

The verbs mediae 3, which have an  for the 156. second radical, like □ la hāb "send", nād "become green", have apparently early lost the 3. Occasionally it appears—at least orthographically —as the third radical: □ la hāb for hāb, sāmA "unite" along with sāM. Cf. § 29.

The verbs ultimae 3 (IIae 3, IIIae 3), as is also 157. Erman, Egypt. gramm.
evident from the Copt., had various peculiarities (cf. C§ 221, 222; 208). Note especially, that (according to § 29) a few verbs IIae ʒ (mostly those in -mʒ) repeat the second radical after the ʒ, in certain forms:

\[
\text{kmʒ "create": } \begin{array}{c}
\text{km} \\
\text{m} \\
\text{ʒ}
\end{array}
\]

\[
\text{wIlʒ "seek": } \begin{array}{c}
\text{w} \\
\text{Il} \\
\text{ʒ}
\end{array}
\]

These forms are possibly to be read kmʒ and wIlʒ and the syllabic sign is only retained out of preference for the customary orthography.

158. The verbs primae ɲ, like \( \text{km} \) \( \text{n} \) \( \text{s} \) “be far” are, in part, also written by many texts without their ɲ, in certain forms; cf. especially § 161. — The verbs mediae ɲ write the ɲ only rarely, and in part probably early lost it; hence \( \text{m} \) \( \text{t} \) “die” is always written for mwʃt (cf. C§ 192) and often \( \text{f} \) for \( \text{r} \) \( \text{w} \) “grow”. — The existence of verbs mediae ɬ may only be conjectured from the Copt. because e. g. the probable form rWs (according to poʃic “wake”) is always written \( \text{W} \) for rs.

159. The verbs IIae gem. in ʒ, like \( \text{p} \) \( \text{s} \) “divide”, as a rule make the form psʃ, wsʃ, insstead of pʃʃ, wʃʃ;
cf. § 30. — On the other hand \( \sqrt{p} \) ps (older \( f_s \)) “cook” has \( \sqrt{p/s} \) and \( \sqrt{psf} \).

Entirely irregular are:

- in “bring” (properly IIIae inf.) sometimes written \( \sqrt{in} \), sometimes \( \sqrt{int} \).
- iw “go”, sometimes \( \sqrt{iw} \), sometimes \( \sqrt{iwt} \),
- i “go” sometimes \( \sqrt{i} \), \( \sqrt{il(?)} \), sometimes \( \sqrt{ii} \),

and especially rdì “give”, which has the form \( \sqrt{rdì} \), \( \sqrt{rdì} \), \( \sqrt{rdì} \), \( \sqrt{rdì} \) and \( \sqrt{didì} \) (?); the last corresponds to the reduplicated forms.

\( \gamma \). THE CAUSATIVE.

By means of the prefix \( \sqrt{s} \) there may be formed \( \gamma \) from every verb, another verb with causative meaning. E. g. with intransitives \( \sqrt{hr} \) “fall”: \( \sqrt{shr} \) “cause to fall”, \( \sqrt{nfr} \) “be beautiful”: \( \sqrt{snfr} \) “make beautiful”; more rarely with transitives \( \sqrt{cm} \) “swallow”: \( \sqrt{scm} \) “cause to swallow” (i. e. “wash down”), \( \sqrt{rh} \) “know”: \( \sqrt{srh} \) “cause to know” (i. e. inform against). These causatives do not remain in the class to which their stem verb belongs; thus the causatives of most biliterals have feminine infinitives (\( \sqrt{hr} \) “fall”: \( \sqrt{shrt} \) “to fell”, cf. C§ 231), and
the causative of mn (infin. smnt) furthermore doubles the last consonant in certain forms (smnn cf. C§ 232).
— The causatives of the triliterals are treated as quadriliterals (cf. C§ 238). — With verbs primae w, the w, according to the old orthography, falls away; e. g. ֲםָנְנ wsh "be far, broad": ְנְנ ssḥ "broaden"; a few of these writings occur later also.

b. VOICE.
162. It is certain that the transitive verb distinguished an active and a passive, and not improbable that the intransitive verb was analogously divided (1. incipient, 2. continuous condition); cf. § 241. 242. C§ 171. 182. Nevertheless, all details are as yet obscure, and the beginner must be satisfied to familiarize himself with the forms thus far known to us, without being able to understand their systematic connection more exactly.

c. EXPRESSION OF THE SUBJECT (INFLECTION).
163. There are two methods of inflecting the verb. The earlier, which reminds one of the Semitic perfect, is still employed in the classic language only within restricted limits (as pseudoparticiple, cf. § 208).
164. The later method uses the personal suffixes of § 73. Cf. e. g. sdm "hear":
c. EXPRESSION OF THE SUBJECT (INFLECTION), 165—167. 69

Sg. 1 c. sdm, Pl. 1 m. sdmn
2 m. sdmk 2 c. sdmtn
f. sdm t
3 m. sdmf 3 c. sdm sn
f. sdm s

On the writing of each suffix cf. § 74. 75.

A. Dual forms occur in the pyramids also,
B. Apart from the uninflected passive (cf. § 206 A), this inflection was first lost with IV lit. and V lit.¹

If the subject is a substantive, no suffix is employed and the substantive follows the noun unconnected:

sdm ntr ḫrwk “the god hears thy voice”.

sdmtw ḫrwk “thy voice is heard”.

An absolute pronoun (cf. § 80) is, by exception, also employed thus as subject: ḫpr sī m ḥsbt “it changes into worms” (for ḫprs).

When the subject is a substantive or an absolute pronoun, the verb frequently receives an ending (with III ae inf.):

¹ According to Sethe.
shdwr sw tswr r ln “he illuminates the earth better than the sun”.

168. The impersonal use of the verb (without subject), occurring in all forms, is frequently met with. Note especially:  

\[ \text{wor “it is”} \]  
\[ \text{irn (n-form, cf. § 194) “that amounts to”} \]  
\[ \text{hprlyr (hr-form, cf. § 204) “that amounts to”} \]. — The passives are employed with especial preference, to express the indefinite subject (Germ. “man”, French “on”):  

\[ \text{rhtw “it is known”} \]  
\[ \text{chnw “one stands”} \]  
\[ \text{dd “it is said”} \]. This impersonal subject is furthermore, often a respectful designation of the king. — On the omission of the subject in animated narrative cf. § 353;  

\[ \text{rdln “they caused”} \] is probably also to be explained thus. 

169. A second (logical) subject, to indicate the real actor, is often added to a passive or intransitive verb which already has a grammatical subject. This is done by means of the particles in and hr:  

\[ wšctw \]

---

2 Sin. 43. 225. 216.  
3 LD III 24 d.  
5 Sin. 243.  
6 Sin. 55.  
7 Math. Hdb. 49.  
8 Sin. 263.
2. USUAL INFLECTION. a. IN GENERAL. 170.

The later inflection of the verb falls into a series of forms, which are in part indicated by endings attached to the stem (like *sdmnf*, *sdmlnf*), but in part also, are distinguished by the vocalisation only. These latter forms have orthographically, essentially the same external appearance (*sdmf*), in the case of most verbs, so that it is difficult for us to distinguish them correctly. Any exact separation of these various forms, is therefore not attempted in the following, and only the two great groups into which they fall, are distinguished.

A. The most important aid for the recognition of the verbal

---

1 Eb. 47, 19. 2 Ppy. I, 97. 3 Br. Gr. W. 139.
forms, is afforded by the pyramids, which often prefix a [ for the indication of the prosthetic vowel ɛ, to the forms beginning with two consonants: [ ɛm, pronounced something like ɛšmok. This prosthetic vowel is left unindicated by the classic orthography ( [ ɛm ); on the other hand the manuscripts of the new empire again indicate it by means of [ ɛ.

*171. The passive of the later inflection ends in t (t̩, tw), which is attached at the end of the word, but precedes the suffix: sdm̩twf, sdmn̩twf, sdm̩ntwf. It is first made with transitives and causatives, then also impersonally with intransitives, for the expression of an impersonal subject (Germ. “man”, French “on”): [ ɛm̩tw “they (impers.) live”.—The ending is written, t or tw in the m. e., and in the n. e. always tw.

A. The pyr. write the ending [ t̩ or ɔ t.

B. The Copt. has lost this passive.

b. THE FORMATION sdmf.
a. THE FORMS OF THE FIRST GROUP.
A. ITS FORMATION.

*172. It apparently includes three or four frequent forms, the differences in which, are no longer to be determined. Its most important classes are as follows:
II lit. _FACTORY "he builds":

III lit. _FACTORY "he hears":

III ae inf. _FACTORY "he loves": the i is nevertheless, only occasionally written by the pyramids ( ) and by the manuscripts of the n. e. ( ). In classic orthography it is only written in the 1 sg. .Factory, cf. § 26.

The position of the vowel, indicated in § 170 A, is denoted by ; this vowel was in one case (with the verb dependent upon  "cause that", cf. § 179) an  (_FACTORY, .Factory, .Factory, cf. C§ 234 sq.); with the other forms nothing is known about it. (Concerning  Factory cf. C§ 247).

That this group really includes different forms, may be seen e.g. in the case of the IIae gem. which in certain cases separate their like radicals:  "he is" (cf. § 178), but in others, do not:  "he is" (cf. § 180). Furthermore, with irregular verbs: in "bring" sometimes has  inf (cf. § 180), sometimes  inf (cf. § 178), sometimes both forms; in "go" varies between  inf
and \( \Delta \) \( \times \) \( \text{lwt} \); \( \text{rd} \) \( \text{dī} \) "give", between \( \Delta \) \( \times \) \( \text{rdīf} \) (§ 174) and \( \Delta \) \( \times \) \( \text{dif} \) (cf. § 178. 180).

**B. ITS USE AS INDICATIVE.**

**174.** In the old language \( \text{sdmf} \) of the I. group, is the usual form for the chief events in ordinary narrative:

\( \Delta \) \( \times \) \( \text{rdī wi ḫnمش m išmt nt smr} \) "His majesty established me in the rank of a friend". In the later language, which prefers other forms and constructions for narration (cf. § 222. 230. 239), \( \text{sdmf} \) is retained in more descriptive sentences, in which the action makes no essential progress. This is especially the case at the close of a short paragraph:

\( \text{wnin mr-pr} \ldots \) \( \text{ḥr srt} \) "the house overseer complained of (the peasant)

\( \text{ddinsn nff} \) they said, ("he is justly punished &c".)

\( \text{gr-pw ḫr mn mr-pr} \) the house overseer was thereupon silent.

\( \Delta \) \( \times \) \( \text{n ṣḥbf n nn n} \) \( \text{srw, ṣḥbf n sḥtī pn} \) "He did not answer the princes,

\(^1\) Una 2.

(but) answered this peasant". (The last two clauses simply enlarge upon the fact of the silence already stated.)

Here belongs also the formal \( \text{ddf} \) "he said", "he says", which introduces direct discourse.

It is further used where a fact is expressed, in descriptions, assertions and the like: "The plant *snwtt \( \text{rwd} s \) \( \text{hr} \) \( \text{hts} \) it grows upon its belly (i.e. it creeps)".

C. IN THE CONDITIONAL SENTENCE.

It is further used in conditional clauses introduced by the particle \( \text{if} \) (cf. § 389): \( \text{ir} \) \( \text{gmk} \) \( \text{st} \) \( \text{adhrk} \) "If you find it . . . then say . . . &c."

The IIae gem. are doubled in this case (\( \text{ir} \) \( m^33k \) 178. "if you see"); *in "bring" has the form \( \text{g} \); *\( \text{rdl} \) "give", the form \( \text{rdl} \).

D. AS A SUBJUNCTIVE.

It is very frequently dependent upon *\( \text{rdl} \) "give, 179. cause that", a combination which led to the formation of a new causative in Copt., cf. C§ 230b. E. g.:

---

1 Bauer 50.  2 Eb. 51, 16.  3 Eb. 37, 18.
E. IN A FINAL CLAUSE. 181. F. AS AN OPTATIVE. 182.

rdîn$\text{f} st$pì n$\text{i} “he caused that I choose for myself (of his land)”$^1$.

180. In this case the II gem. are not doubled; $\text{br}^\text{ing}$ has the form $\text{br}^\text{ing}$, rdî “give” $\text{g}^\text{i}v\text{e}$, $\text{c}^\text{o}m^\text{e}$ “come” $\text{c}^\text{o}m^\text{e}$. — The vowel was here an ö, according to the Copt., cf. Ç$^3$ 234 sq.

E. IN A FINAL CLAUSE.

*181. This very frequent form is probably identical with that of the subjunctive and optative. It stands without introduction: “You might allow your servant to come to me, $\text{br}^\text{ing} h\text{b}^\text{i} n$ $\text{k} s$ $\text{r}^\text{w} h$ $\text{r}$ $\text{s}$ that I may therefore send him to you”$^2$.

F. AS AN OPTATIVE.

*182. Probably identical with the preceding: $\text{m}^\text{r}^\text{k} \hmtk$ “Love thy wife”$^3$. It is often introduced by means of the particle $\text{l}^\text{h}$: $\text{l}^\text{h} d^\text{d}s n$ “let her say to me”$^4$ or by means of a preceding $\text{i}^\text{r}$ “do” (impv.): $\text{i}^\text{r} m\text{s}^\text{s} k$ “see”$^5$.

---

$^1$ Sin. 79. $^2$ Peasant 38. $^3$ Prisse 10, 9. $^4$ Sin. 172. $^5$ Eb. 75, 12.
B. Since the n. e. \( \texttt{imi} \) (imperative of \( \texttt{rdî} \) "cause that", cf. § 256) with following verb is often substituted for it: \( \texttt{imi mdoʃ ni} \) "let him speak with me" (lit. cause that he speak with me).

The word for "behold" undoubtedly belongs to 183. the optative:

Sg. m. \( \texttt{mk} \) (\( \texttt{mîk?} \) cf. § 35),

\( \texttt{mk} \) (and the like) \( \texttt{mt} \),

Plur. \( \texttt{mtn} \) (and the like).

\( \texttt{β. THE FORMS OF THE SECOND GROUP.} \)

\( \texttt{A. ITS FORMATION.} \)

The forms of this group may be recognised with 184* certainty, only with those verbs which are marked by the doubling of the last consonant according to § 185. In the case of most verbs they are not to be recognised from the orthography.

A. There are also found forms of this group in \( \texttt{w} \) and \( \texttt{y} \), especially in old texts, e. g. \( \texttt{h3wkh} \) "thou comest down", \( \texttt{ddyk} \) "thou sayest", but probably only with verbs which have a \( \texttt{i} \) or (according to § 151 A) a \( \texttt{w} \) as the last radical\(^1\).

The form with the final consonant doubled, is 185.

\(^1\) According to Sethe.
found in the case of the IIae gem., IIIae gem., as well as the IIIae inf. and IVae inf. With the last two it is especially easy to recognise it, for they are not doubled except in the case of § 259. 289. It is to be noted that, in the case of the frequently recurring verb IIIae inf. ḫr “make”, the form ḫrr is indicated by ְ.

186. In place of the form with final consonant doubled, the irregular verb ṛḏ letter ḫ “give” has the form ְ, ְ, or ְ, i.e. ḫḏi (?) (cf. § 160).

B. USE AS AN INDICATIVE.

187. The significance of the form is apparently emphasis; with reference to the future it is used very often, in promises, threats, directions, questions &c.:

prr grt hrw 3 pn n šndtī nb “These three days (rations) will be delivered to every š.-priest” (lit. come out for)¹.

nn ṣṣf “he shall not divide”².

didk ḫ3 bit “let honey drop in”³.

¹ Siut I, 296. ² Siut I, 311. ³ Eb. 7, 22.
C. IN CONDITIONAL CLAUSES.

It is further used in conditional clauses, where the particle *ir* (cf. § 389) does not immediately precede:

\[ gmmk btf \ldots ddhrk \] "If you find that his body \ldots, then say &c."

D. DEPENDENT UPON VERBS.

It further follows the verbs *rḥ* "know", *mr* "wish" (lit. "love"), *gm* "find"; likewise *wd* "command" and the like:

\[ wdn \ hnf \ prrî \]

*r smt tn* "His majesty commanded that I go to this mountain".

\[ ntrrf \]

*lw hntî rḥî*

"My majesty knows that he is a god".

\[ \ldots \]

*I desire that you say*.

E. DEPENDENT UPON PREPOSITIONS.

It is dependent upon various prepositions, which govern a sentence after the manner of our conjunctions; the usage seems to vary. E. g.:

1 Eb. 36, 15.  2 LD II, 149 e.  3 LD III, 24 d.  4 Westc. 9, 8.
"let the patient drink this \( r \) \( w\hat{s}\hat{s}f \)
"till he urinates"\(^1\).

\( h\hat{r} \) \( m\hat{z}\hat{g}f \) \( m\hat{l} \) "because he
sees me"\(^2\).

\( m\hat{l} \) \( h\hat{c}\hat{c}f \) \( m\hat{i}\hat{s}\hat{t}(?) \) "as he shines
in the region of light"\(^3\).

"Be not haughty toward him
\( h\hat{f}t \) \( h\hat{s}\hat{s}f \) when he is wretched"\(^4\).

\( \gamma \). **APPENDIX.**

191. Beside the cases cited in §§ 172—190, the for-
mation \( s\hat{d}\hat{m}\hat{f} \) is found elsewhere, where it is not
possible to state anything definitely concerning the
forms employed.—On the substantivized forms cf.
§ 282 sq., on the relative forms § 394.

192. The form \( s\hat{d}\hat{m}\hat{f} \), in contrast with \( s\hat{d}\hat{m}\hat{m}\hat{f} \) (§ 197), is
sometimes present in meaning; so especially in rela-
tive sentences, cf. § 396.

193. All that is stated in §§ 172—191, as far as may
be seen, is valid also for the passive in \( t \) (cf. § 171).
In the *first group* the II lit. make the form: \( ^{\text{kd}} \text{twf} \),
the IIIae inf.: \( m\hat{d}t\hat{w}f \), \( r\hat{d}i:\hat{t}\hat{w}f \);
in the second group however \( r\ddot{a}l \) has the form \( \text{did} \text{dot} \).

c. THE \( n \)-FORM \( sdmnf \):

a. ITS FORMATION.

In this form the stem receives an ending \( n \), which 194* is written after the determinative: \( \text{mrnf} \) "he loves". It belongs inseparably to the stem, as may be seen from § 338 sq.; the passive ending follows it: \( \text{gmntws} \) "she is found".

Note further, that the form began with a simple 195. consonant (that is to say, without the prosthetic vowel, cf. § 170 A), and that:

1. the II\(_{ae}\) gem. contract their consonants: \( \text{mrnf} \) "he sees",

2. the III\(_{ae}\) inf. show only the second consonant: \( \text{mrnf} \); \( \text{mrnf} \); \( \text{ir} \) "make" has the form according to § 151,

3. the verb \( r\ddot{a}l \) "give" (cf. § 160) nearly always has the form \( (\text{mrnf}, \text{mrnf}) \).

B. The \( n \)-form had, for the most part, already lost its \( n \) in

Erman, Ägypt. Gramm.
β. ITS USE.

196. This form, which is only used independently, originally served to narrate events with animation; e.g. in an old text, which otherwise usually employs \textit{s\textit{dmf}} for narrative, the events of war are recalled with liveliness by means of the \textit{n-form}:

\begin{verbatim}
\text{\textbf{in m\textit{sc}} pn, b\textit{3nf} t\text{i\text{3}} Hr\text{i\text{6}}w-\text{\textit{sc}}} "This army came, it cut to pieces the land of the Bedouins."\textsuperscript{1}
\end{verbatim}

Thence further also, in asseveration, explanation and the like, e.g.: "Lay this upon the place of the extracted hair, \textit{n\textit{rwdn}}f "it (certainly) will not grow (again)".\textsuperscript{2}

\begin{verbatim}
\text{\textbf{m\textit{tn rh\textit{tn}}} "behold, ye know that etc." (in ceremomious style).}\textsuperscript{3}
\end{verbatim}

\textsuperscript{*197.} It often indicates the past, especially in relative clauses (cf. § 396), but occurs elsewhere also (cf. § 220. 283) in contrast with a preceding verb: "His majesty came in peace \textit{sh\textit{rn}}f \textit{h\text{i\text{5}}t\text{i\text{w}}}f "he had overthrown his enemies"\textsuperscript{4} (i.e. after he had overthrown them).

\textsuperscript{*198.} Since the m. e. the \textit{n-form} is used for the most part, in an entirely different manner; it adds to a

\textsuperscript{1} Una 22. \textsuperscript{2} Eb. 63, 17. \textsuperscript{3} Siut I, 310. \textsuperscript{4} LD II, 122a.
preceding word or sentence, an accompanying remark more particularly explaining it (circumstantial clause). So in descriptions:

\[ r \text{ gr, } n \text{ mdwnf} \]

“The mouth is silent and he does not speak”.

“He found the canal obstructed \[ n \text{ skdn dpt } hrf \text{ and no ship sailed upon it (longer)} \].”

And likewise in narratives: “Then this peasant went to implore him \[ gmnf \text{ sw } hr \text{ prt} \text{ and found him as he came out } \& c \].”

As may be seen in the case of the last clause, the question is no longer one respecting an unimportant accompanying circumstance, but the second occurrence (he found), overagainst the preceding important event (he went), is pushed into the background in a stylistic manner only.

A. The pyramids already employ the above also.

It is a remarkable fact, that \[ nfr \text{ “be good” } \text{ 199.} \]

seemingly always takes the \( n \)-form: \[ nfrn \text{ bw “The place is good”} \text{, } nfrn \text{ Ppy “P. is well”}. \]

---

1 Prisse 4, 4.  
2 Inscription of Sehel.  
3 Bauer 34.  
4 Prisse 9, 10.  
5 Pepy 1. 169. 170.
84 d. THE in-FORM ṣdmn̄f. e. THE hr-FORM ṣdmhr̄f. 200—204.

d. THE in-FORM ṣdmn̄f.

*200. That which is stated in §§ 194, 195 is valid also for the formation of the in-form: ∑ ∑ sdmn̄f

201. Originally this form was ceremonial; it is therefore especially preferred where the subject is a person to whom respect is due, e. g. ∑ ∑ rdlin ḥn̄f “the king occasioned”¹ (sentences of the context with other forms).

202. But many texts of the m. e. also employ it elsewhere in narrative, especially in the case of the common words: ∑ dd “speak”, ḥ ir “do”, ∑ in “go” and ∑ in “bring”.

203. It is further, often used in directions, e. g. ∑ ∑ ∑ ∑ ∑ swrl̄n s “Let the man drink”,² or in “when water comes out of it, ∑ ḥ ir̄nk ns then make for it (the receipt) &c”.³

e. THE hr-FORM ṣdmhr̄f.

204. This rare form also corresponds to the n-form in its formation. It is employed in descriptions: ∑ ∑ ∑ ∑ ∑ ∑ ∑ ∑ ∑ ∑ ∑ wn̄hr̄f w3d mi wnn tp

¹ Sin. 243. ² Eb. 32, 21. ³ Eb. 56, 9.
t5 “He was green (i.e. throve) like one who is upon earth”. Here also, probably belong the formulae ḫprhrf “that is” (as result of a computation) and ℓ (Ellipse for ḏḥrtw rs “they say to her”) “her name is”.

It occurs more frequently in directions (like the in-form § 203), e.g. ℓ ḏḥrk rs “say to her”, ḏḥrtw “let there be said”.

3. THE UNINFLECTED* PASSIVE.

This formation, which when written, is exactly like the active, leaves one in doubt whether it should be classified with the earlier or later inflection. It is only to be found with certainty, with nominal subject, e.g.

* The word “uninflected” does not adequately translate the term used by the author, viz. “endungslos” as distinguished from the passive ending in ṯw; but “endungslos” has absolutely no equivalent in Eng., and as this passive can with certainty be found only with nominal subject, it may be stated with the greatest probability, (as far as inflection involves pronominal endings) that it was uninflected. It certainly is so, for the practical purposes of grammar.

1 Eb. 2, 4. 2 Math. Hdb. 41. 3 Eb. 9, 20.
4 Eb. 36, 14. 5 Eb. 16, 3. 6 Westc. 11, 5.
and occurs with unchangeable stem, in one form only.
—The impersonal verbs of § 168 also, are probably to be explained in part as uninflected passives.

A. There are a few obsolete passive forms with suffixes, like e. g. "krss "she was buried", and these may also belong here. The uninflected passive would then belong to the later inflection.

207. It often takes the place of the passive in t, especially where the latter would be in the n-form, in a circumstantial clause (cf. § 198) or the combination with ChCn (cf. § 230). On the other hand, it cannot be used in dependent clauses, so that, for example after rdî, the passive in t must always be used.

4. OLD INFLECTION (PSEUDOPARTICIPLE).

a. ITS FORMATION.

*208. It is found in only one form, the so called pseudoparticiple, the formation of which, in the m. e. according to the usual orthography is as follows:

Sing. 1 c. | mntl (mntm?) "I remain"
2 m. | mntl
f. | mntl
3 m. | mn
f. | mntl

1 Mar. Mast. 201.
4. OLD INFLECTION (PSEUDOPARTICIPLE). a. ITS FORMS. 209—211. 87

Plur. 1 c. mnwën

2 c. mntiwnii

3 c. mn.

A. The original forms of the 3 pl. (cf. § 212) and the forms of the dual (m. mnwën, f. mntyw, mnty) were early lost.

B. In the n. e., other forms also begin to drop out; in Copt. (cf. C§ 181) the 3 m. sg. has supplanted all the others and only a few 3 f. sg. are preserved with them.

The ending of the 1 sg. is also written 209. and many texts seem regularly to use this form with certain verbs ( , , ). Other writings are (o. e.), and rarely .

B. In the n. e. it was pronounced -k.

In the case of the endings ti, the writing 210. is customary, especially in the manuscripts of the m. e.

B. Vulgar writings of the n. e. are t and tw; the ending was at that time, already spoken -t.

The 3 m. sg.1 originally had the ending j, more 211. rarely : wrhë “(he is) anointed”, ñë “(he is) mixed”; in the case of the IIIae inf. and IVae inf. the j, with the final ë becomes .

1 Details according to Sethe.
msū ‘(he is) born’. In the m. e. the writings in
are frequent, those in not rare, but those in
have disappeared; the ending of most verbs was
probably already lost.

212. may also be written for ; there
was originally in the plural a 3 m. in and a 3 f.
in ; but both were already lost at a very remote
period and only the 3 m. occasionally occurs in the
m. e.: iw ‘they come’.

213. The pseudoparticiple apparently had originally
two forms, an active-transitive and a passive-intransi-
tive. But the first was very early lost.

214. The vocalisation can be restored only in the pas-
sive-intransitive forms, which are retained in the Copt.;
thus restored, in the most important cases it runs
about as follows, the endings being added according
to the later pronunciation, as -e and -te:

- II lit. m. mène, f. mente (“remaining”)
- II gem. m. kébe (“cool”)
- III inf. m. mosje (“born”)
- III lit. m. sodme, f. esdomte (“heard”)
- III gem. m. sepđōde (“prepared”)
- IV lit. m. hemhôme, f. hemhomte (“roaring”).
A. The pseudoparticiple of the transitive of the II lit. was pronounced something like ērl̄w ("knowing").

In the case of the III ae inf., the forms  and  occur side by side, but the latter is the more frequent.—Of the irregular verbs, rdī "give" has the form  , rdīw, also  dīw and  didīw;  “go” makes the 3 m.  , otherwise  &c.

b. ITS USE.

a. IN THE ACTIVE-TRANSITIVE FORM.

The few old texts, which still make this form of 216. the pseudoparticiple, employ it as a narrative form, and preferably at the close of a short paragraph, from which it draws a conclusion. It, seemingly, still occurs, only in the 1 sg.:  īrkwi “and I did”,  shēkwi “and I caused to descend”.—Only the verb ḥī "know"; although it is transitive, has preserved a living pseudoparticiple; its use corresponds exactly with that of the passive-intransitive form (cf. § 217 sq., 241).

b. IN THE PASSIVE-INTRANSITIVE FORM.

The pseudoparticiple of the intransitives and pass- 217. sives, as well as that of the transitive verb ḥī
"know" (cf. § 216), is still used as an independent verb, almost only in the 1 sg., e.g. \(\text{I \text{ was \ therefore \ praised}}\).\(^1\)

A. The pyr. still have, e.g. \(\text{he satisfies the two gods, and they are satisfied}\)\(^2\) (3 m. du.) and the like.

It is more frequently employed in order to annex to a substantive or pronoun a closer limitation, where we would, for the most part, employ a participle. E.g.

\(\text{This command came to me, (as) I stood (in the midst of my tribe)}.\)\(^3\)

\(\text{If you find his sole hot and his body cool} \) (lit. "if you find his sole, it is hot”).\(^4\)

\(\text{Look at him stretched out} \)\(^5\)

B. In Copt. the remains of the pseudoparticiple have entirely gone over into participles. Cf. C§ 181, 182.

On the use of the pseudoparticiple as apparent predicate cf. §§ 240 sq., 246 sq., 233, 234, 402.

---

\(^1\) LD II, 122a. \(^2\) Pepy I, 348. \(^3\) Sin. 199. \(^4\) Eb. 37, 3. \(^5\) Eb. 36, 7.
5. COMPOUNDS WITH FORMS OF THE USUAL INFLECTION.

a. INTRODUCED BY "IT IS".

a. THE FORMS \textit{\textit{iw}} \textit{sdmf} AND \textit{\textit{iw}} \textit{sdmnf}.

With the impersonal auxiliary verb \textit{\textit{iw}} "it 220* is", there are made two forms, which as a rule are distinguished in usage as follows:

\textit{\textit{iw}} \textit{sdmf} "he hears (heard)",

\textit{\textit{iw}} \textit{sdmnf} "he (had) heard" (past, cf. § 197).

With the first, both passives occur; with the second, only the passive in \textit{\textit{t}}. With nominal subject, the forms run: \textit{\textit{iw}} \textit{sdm ntr} "the god hears", \textit{\textit{iw}} \textit{sdmn ntr} "the god heard".—In contrast with the simple forms \textit{\textit{sdmf}} and \textit{\textit{sdmnf}}, these have a certain independence (like other clauses introduced by \textit{\textit{iw}} cf. § 246, 332).

It is therefore used, where a fact is to be expressed in a single independent remark: "This plant is used so and so \textit{\textit{iw}} \textit{g} \textit{r} \textit{t} \textit{srw} \textit{dtw} \textit{sn} \textit{n st m t3yf} \textit{prt} "further, the hair of a woman is made to grow by means of its fruit".\footnote{Eb. 47, 19 (cf. § 115).}

"The prince came to the king and said, \textit{\textit{iw}} \textit{inni} \textit{Ddi} I have brought \textit{Ddi} hither".\footnote{Westc. 8, 8.}
222. It is used especially at the beginning of a narrative or of one of its paragraphs: 
\[ \text{\textit{iw h\text{\^e}bn \textit{wi nbl}}} \] "My lord sent me out &c."
(Beginning of the narrative).

\section{WITH THE AUXILIARY VERB \textit{wn}.}

223. The corresponding use of the auxiliary verb \textit{wn} "it is", is far more rare and probably archaic. There are found \[ \textit{wn sdmf} \] "he hears", \[ \textit{wn sdmnf} \] "he heard" and a \[ \textit{wnin sdmf} \] "he heard".

\section{WITH DOUBLE SUBJECT.}

\section{THE FORM \textit{iwf sdmf}.}

224. This form \[ \textit{iwf sdmf} \] (lit. "he is, he hears"), means "he is accustomed to hear". With nominal subject it runs as follows: 
\[ \textit{iw ntr sdmf} \] "The god is accustomed to hear". When a number of verbs in this form follow one another, \textit{iwf} is used with the \textit{first} of them only.

225. It is used (similarly, the forms of § 221) in re-

---

1 LD II, 149e.
marks, in which a fact is stated: \( \text{in grt prts dítws hr t} \) “Further, its fruit is accustomed to be laid upon bread”.\(^1\)

“He who has this book \( \text{inw ckh prf . . . inw rhf hprwt nf nbt} \) goes in and out . . . . he knows all that happens to him”.\(^2\)

But on the other hand it is also employed (like 226. the forms in §§ 246—249) in descriptions and descriptive narratives:

\( \text{inw díi nw n ḫb “I gave water to the thirsty”}. \(^3\)

It is especially preferred in the case corresponding to § 249, for the continuation of a relative clause or the like:

\( \text{s, stt m nhbtf, inw mnf cî n nhbtf “A man on whose neck there is a swelling and who has pain in the two organs of his neck”}. \(^4\)

\( \text{β. THE FORMS wnf sdmf AND wnlnf sdmf.} \)

The form \( \text{wnf sdmf} \) is very \( 228. \)

\( ^{1} \) Eb. 51, 18. \( ^{2} \) Tobt. 15 B, 6. \( ^{3} \) Sin. 96. \( ^{4} \) Eb. 51, 20.
rare; another, wnǐnf sdmf, which only occurs where one of the words for king, forms the subject: \[\text{wnǐn hnf h3bf nī “His majesty sent to me”}^{1}\text{, is explained by § 346.}\]

\section{THE FORM hrf sdmf.}

\subsection*{229.}

This rare formation is evidently related to sdmhřf, and like it, is used in directions:

\[\text{hrk wəhk dīk “lay your hand”,}^{2}\]

\[\text{hr st gss dʒdʒs īm “Let the woman anoint her head with it”,}^{3}\]

\[\text{hrtw dītw “Let there be given”.}^{4}\]

\section{c. WITH A VERB OF MOTION.}

\subsection{a. WITH chcn AND chC.}

\section*{*230.}

The very frequent combination \[\text{chcn sdmnf (“he arose and heard”?)},\] originally marked an occurrence in the narrative, as significant (something like “then he heard”). In the popular language of the m. e., however, it is weakened to the usual form for narrative (“he heard”). \[\text{is also written archaically}^{5}\text{, and}^{6}\]

---

1 Sin. 174.  
2 Eb. 48, 3.  
3 Eb. 47, 21.  
4 Eb. 44, 3.
A. In the language of the o. e. this compound still seems to be wanting.

In the case of the active of the transitives, \( ChCn \) always has the \( n \)-form following: \( ChCn \) rd\( \text{inf} \) "he gave", \( ChCn \) \( \ddot{a}dn \) \( hCti \) "The prince said".

No example of the passive in-\( t \) occurs; the uninflexed passive, however, is freely used after \( ChCn \) (cf. § 207): \( ChCn \) \( sspd \) \( t3 \) \( \ddot{s}sp \) "The house was fitted out".\(^1\)

\( ChCn \) rd\( \ddot{i} \) "they (impers.) occasioned".\(^2\)

The nominal sentence described in § 240sq., whose verb is in the pseudoparticiple, is employed with intransitive verbs:

\( ChCn \) \( \hntf \) \( w\dot{d}3 \) \( m \) \( htp \) "His majesty went in peace".\(^3\)

If the subject is a pronoun, it is attached to \( ChCn \) as suffix: \( ChCn \) \( \hntk\dot{w}i \) "I sailed up".\(^4\)

\( ChCn \) \( g\ddot{r}ti \) "She ceased".\(^5\)

Other than in narrative, there is also used the 234.

---

\(^1\) Westc. 3, 8. \(^2\) ib. 8, 4. \(^3\) LD II, 122a.

\(^4\) LD II. 122b. \(^5\) Westc. 6, 3.
form \( \Delta \Diamond \) \( \text{ChC} \), which transitive verbs follow in the form \( \Delta \Diamond \) \( \text{ChC} \), while intransitives, just as with \( \text{ChCn} \), follow in the pseudoparticiple:

\( \Delta \Diamond \) \( \text{ChC} \) \( n\tilde{f} \) \( \text{dd} \) \( \text{t} \) \( \text{nbt} \) "then he discharges all worms".\(^1\)

\( \Delta \Diamond \) \( \text{ChC} \) \( s\tilde{h} \) \( t\) \( t\) \( h\) \( r \) \( c \) "then she falls immediately".\(^2\)

\( \beta. \) WITH \( in, prn \) AND \( lw. \)

235. The forms \( \Diamond \) \( \Delta \) \( in \) and \( \square \) \( \Delta \), which are derived from \( l \) "come" and \( pr \) "go out", are far rarer than \( \text{ChCn} \), but like it in construction and original meaning.

236. \( \Delta \) \( \text{iw} \) "go" is also employed like \( \text{ChC} \), cf. \( \Delta \)

\( \text{iw} \) \( m\tilde{h} \) \( k\hat{w} \) "then I am full".\(^3\)

\( d. \) THE FORM \( \Delta \Diamond \) \( \text{pw} \).

237. The form \( \Delta \Diamond \) \( \text{pw} \), in the first instance, means something like "it is he who hears" (cf. § 87 on \( \text{pw} \)); but it further appears to denote also a condition attained: "When you find this or that in him \( \square \) \( s\text{nb} \) \( f \) \( \text{pw} \) then he is well".\(^4\) The verb has the form of the second group, cf. § 184 sq.

---

\(^1\) Eb. 20, 7. \(^2\) Eb. 51, 18. \(^3\) Math. Hdb. 35, 36. \(^4\) Eb. 37, 10.
6. **COMPOUNDS WITH *ir* "MAKE".**

The combination of *ir* "make, do" with an infinitive dependent upon it as object ("he does hearing"), is used:

1. Often with verbs of going: 
   
   \[ \text{\textit{\textit{ir}l} \ \textit{\textit{smt}} \ "I went"} \]

2. With compound verbs: 
   
   \[ \text{\textit{\textit{irni} \ \textit{dr-t}}} \ "I journeyed" \]

   \[ \text{\textit{\textit{lrhrk} \ \textit{w3h-} \ \textit{d3g}}} \ "you multiply" \]

B. This combination first supercedes the inflection, with the IV lit. and caus. III lit., later with all verbs (cf. C§ 249).

The strange combination 

\[ \text{\textit{\textit{pr} \ \textit{pw} \ \textit{lrnf}}} \ "it was hearing which he did" \] which is used since the m. e. especially with verbs of going, as a form of narrative, is much more frequent. E. g.

\[ \text{\textit{\textit{prt} \ \textit{pw} \ \textit{lrnf}}} \ "he went out", because \textit{pr} is a verb of going, while the parallel verbs are expressed by means of \textit{sdminf} or \textit{ch3n sdmnf}.

7. **COMPOUNDS WITH THE PSEUDOPARTICIPLE OR INFINITIVE.**

a. **WITHOUT THE AUXILIARY VERB (IMPROPER NOMINAL SENTENCE).**

The model of the nominal sentence (cf. § 327 sq.) 240*.

was early transferred to sentences with verbal predi-
cate; the subject (a noun or pronoun) preceding, the verb following. In general, the verb is in the pseudoparticiple in the case of intransitives and passives; and in the infinitive with the preposition ḫr, in the case of transitives.

B. This kind of sentence was the origin of the late Egyptian forms twf sdm (qCOTM) and twf ḫr sdm (qCωTMM). Cf. C§253sq.

241. More exactly, the following are in the pseudoparticiple:

1. the passives (ḥ3 "divided", śhr "overlaid" etc.),
2. the verbs of going (ḥ3 "descend", ǹw "go", i "go", ḫr "fall"),
3. the verbs of condition when they denote the continuation of the condition (mḥ "be full", mr "be sick", ǹw "be broad" &c.); but also ḫpr "to be" even where it means "become".
4. ḫr "know" (cf. § 216), even with following object.

242. The following, however, are in the infinitive with ḫr:

1. the transitive verbs with or without an object following, (rdi "give", ǹsp "receive", ḫrp "lead", m3 "see" &c.),
2. verbs of condition, when they denote the entrance upon the condition, (m3w "recommence", ḫk "diminish", ḫpr "happen"),
7. **Compounds with the Pseudoparticiple or Infinitive.** 243. 244. 99

3. verbs of crying and weeping (*nml* "roar, low", *rmy* "weep" &c.).

A. In the oldest language the infinitive with *hr* does not yet seem to have been usage here, for at that time the pseudoparticiple was still made with all verbs (§ 213).

Its use corresponds to that of the real nominal 243. sentence (cf. § 328 sq.). It is used, therefore in assertions: 

\[ n cbc pr m ri \] "No contradiction comes out of my mouth"1, and especially after *mk* "behold" (§ 183) where the old absolute pronouns (§ 80) are used:

\[ mt S3-nht lw m C3m \] "Behold (thou woman), Sinuhe comes as an Asiatic"2.

\[ mkwiilkwi \] "Behold, I come"3.

It is further used in descriptions and in the descriptive parts of a narrative:

\[ \text{Old age comes on . . . , weakness(?) recommences} \]4.

---

1 LD II, 136 h.  
2 Sin. 265.  
3 Westc. 8, 12.  
4 Prisse 4, 2—3.
b. INTRODUCED BY AUXILIARY VERBS. a. WITH THE VERB iw. 246.

Just as the forms sdmf and sdmnf are introduced by the auxiliary verb \( iw \) (cf. §§ 220—222),

1 Sin. 129—131.  
2 Westc. 3, 10.  
3 LD III, 24 d.  
4 Inscription of Sehél.
so the nominal sentence with verbal predicate just treated, is also often introduced by *iw*. The modification introduced by this *iw*, is in both cases the same.—If the subject is a pronoun, it is expressed by a suffix: therefore corresponds to  

P. In the popular language of the m. e. the forms *iwf* *sdm* and *iwf* *hr* *sdm*, in the case of a pronominal subject, are already supplanting the nominal sentences of §§ 240 sq.; the use of *iwf* *sdm* especially, later becomes still more extended. They are preserved in Copt. as *EqCOTM* (*iwf* *sdm*) and *EqCWOTM* (*iwf* *hr* *sdm*). Cf. C§ 251, 262 sq.

It is used where a fact is expressed in a single independent remark (cf. § 221):

"Say concerning it, *iw mrsf* (?) *ph3ti* his liver (?) is divided".

It is further employed at the beginning of a narrative or of one of its paragraphs (cf. § 222):

"My statue was overlaid with gold and its apron with silver-gold."

Even when the sentence in question, expresses

---

1 Eb. 36 17.  2 Sin. 307.
only an accompanying subordinate circumstance, this form is used like that without `nw (cf. § 245):

\[ \text{ms} \; \text{sw} \; \text{lrns} \; \text{hrf}, \; \text{nw} \; \text{msC} \; \text{pn} \; \text{n} \; \text{stn} \; \text{hr} \; \text{m33} \]

"she bore upon it, while this army of the king looked on"\(^1\).

249. When a number of relative nominal sentences are joined to one noun (cf. § 245), all but the first are introduced by `nw (cf. § 227):

\[ \text{ir} \; \text{m33k} \; \text{hr-3tt} \ldots \text{nht} \; \text{htf} \; \text{hrs}, \; \text{nwf} \; \text{hr} \; \text{mn} \; \text{r-ldf} \]

"If you see any one with a swelling ... whose body is therefore stiff and who is diseased in his stomach(?)"\(^2\).

\section{β. With the auxiliary verb \textit{wn}.}

250. Here belong the forms, distinguished according to § 241–242, \textit{wnf sdm} (the verb is pseudoparticiple) and \textit{wnf hr sdm}:

\[ \text{wnf hr} \; \text{dw3 ntrw} \]

\textit{nb}. "He worshipped all gods"\(^3\).

\begin{itemize}
\item \(^1\) LD II, 149 c.
\item \(^2\) Eb. 25, 4.
\item \(^3\) Fr-hw\(f\) II a, 14.
\end{itemize}
WITH THE AUXILIARY VERB \textit{wn}. 251. 252.

A remarkable formation, in which the auxiliary 251. verb is also in the pseudoparticiple, is found in \textit{wnl} \textit{dwnkl} "I threw myself down (?)". 

The forms distinguished according to § 241—242 252*.

\textit{wninf sdm} and \textit{wninf hr sdm}, which represent an action or a condition as the result or conclusion of that previously narrated, are more frequent. They are therefore employed for the most part, at the close of a paragraph: "This or that was done to cheer the king and the heart of his majesty was (on that account) cheered (lit. cool)". But they are further employed at the beginning of a paragraph also, where they then connect the latter with that which precedes:

"The wise man had the children called, gave them the book and said to them &c.". 

\begin{itemize}
\item \textit{LD II, 149 c.}
\item Sin. 252.
\item Westc. 6, 1.
\end{itemize}
8. COMPOUNDS WITH \( r \) AND THE INFINITIVE.

253. On the basis of the construction \( lwf \, r \ldots \) "he will be something" (e.g. \( lwf \, r \, smr \) "he is for a friend", i.e. "he will be a friend"\(^2\)), there developed a kind of nominal sentence, in which (cf. § 240) the preposition \( r \), "to", with following infinitive, indicates the future:

\[
\text{\( wi \, r \, n\text{hm} \, c\text{\&k} \) "Behold, I will take thy ass"\(^3\).}
\]

254. The auxiliary verb \( lw \) was early prefixed to this kind of sentence also (as in § 246 sq.) and the form thus originating, \( lwf \, r \, sdm \) "he will hear", has already nearly superceded the simple form in the popular language of the m. e.

B. In Copt. it is preserved as \( EQEC\text{\&TM} \) (cf. C§ 269).

---

\(^{1}\) Prisse 2, 5.  \(^{2}\) Sin. 280.  \(^{3}\) Bauer 11.
9. IMPERATIVE. 255. 256.

The imperative had no ending in the singular: 255*.

\( mh \) "fill" (something like "mho"); in the plural it ended in \( i \) or \( w \) ("mhow"). In classic orthography, however, these endings are almost never written, and the plural of the imperative is indicated only by the determinative \( |: \) \( | \) \( shgw \) "remember" or left entirely unindicated.

A. In the pyr. the II lit. indicate the prosthetic vowel, in the sing. according to § 170 A: \( ihr \) "fall" (something like "hro"); the IIae gem. are doubled, \( p\dot{s}\). The plural of the IIIae inf. in the pyramids ends in \( \| \), i.e. the third radical \( i \) and the ending \( i \).

B. Since the n. e. the infinitive is also used instead of the imperative; the Copt. still possesses but few imperatives of the old formation, cf. C§ 305.

In detail note further:

\( \wedge \) impv. of \( \wedge \) "make, do",

\( m\) incorrectly in the n. e. \( m\), \( m\), older \( m\), and the like, is used as imperative of \( rd\) "give, cause". (Copt. \( m\), cf. C§ 305; the signs \( m\) and \( m\) are the determinatives of giving).

\( m\), more rarely \( \wedge \), later \( \wedge \) and

1 Mar. Ab II, 31:
the like, as imperative of the verbs of coming, (Copt. m. ΑΜΟΥ, f. ΑΜΗ, cf. C§ 305).

The distinction in gender observable in the two Copt. forms just cited, was probably existent in the old language also, but is not indicated in the orthography.

A. The pyr. write mi “give” for the most part \(\Delta m\) \(\text{imi}\) (with the sign \(\Delta m\)); they have further a real imperative of rd\(i\), which is written \(\Delta d\).

B. On the employment of \(\Delta m\) “give” in clauses expressing a wish, cf. § 182 B. From frequent usage since the m. e., \(\text{imi}\) loses its original meaning “give”; \(\text{imi}\) dit\(w\) “cause that there be given” (in the LE. contracted to \(\Delta m\) \(\text{ditw}\)), replaces it.

257. The imperative is often followed by the old absolute pronoun (cf. § 80):

\[\text{\(\Delta m\) \(\text{tw}\) “hasten (thou)”,}\]

\[\text{\(\Delta m\) \(\text{tn}\) “go (ye)”}\]

The words \(\text{r-}\) and \(\text{ir-}\), employed with suffixes for emphasis (cf. 348), often follow it also:

\[\text{\(\text{sm}\) \(\text{rk}\) “gehe”,}\]

\[\text{\(\text{wn}\) \(\text{irtn}\) “open ye”,}\]

\[\text{\(\text{sdnw}\) \(\text{irf}\) \(\text{tn}\) “hear ye”}\]

---

1 Sin. 282. 2 Totb. ed. Nav. I, 27. 3 LD III, 24 d.
10a. Participles. 258. 259.

10. THE NOMINAL FORMS OF THE VERB.

a. PARTICIPLES.

The participles, which as a rule are written as 258*, follows:

Sg. m. amenti (s) Pl. m. amenti (s) and

f. amenti (f) f. amenti (f)

may have, for the most part, had a vocalic ending i, as may be conjectured from the pl. m. The sing. m. furthermore, often has the masculine substantive ending (v) (cf. § 96), especially where it stands alone as a substantive, e.g. (v) “begetter"1, (v) “chosen one"2.

The participles occur in active and passive forms, 259. of which, those of the present and future, and those of the past seem to have been distinguished.3

Note in detail:

1. The IIae gem. have sometimes separated, sometimes contracted consonants: (v) "being" or (v) "being".

---

2. The IIIae inf. in the active, sometimes double the second radical (present), and sometimes do not (past): \( mrrw \) "loving", \( prr \) "going out", but \( prr \) "having born" (fem.), \( prr \) "having gone out."—Beside the forms with doubling (present) there occur in the passive, others in which the third radical \( i \) (cf. § 151) is visible (past): \( gmyt \) "found" (fem.) but \( gmmi \) "being found" (fem.)—In the case of \( mrrw \) "make, do", \( prr \) is written for \( irr \), and \( prr \) for \( iry \), according to § 151.

3. The irregular verb \( rdi \) "give" has the active form \( rdi \), \( didi \) "giving".

260. The participle is either used attributively like an adjective:

\( hwwt(?) \) \( irywt \) \( rf \) "the wrong done against him"\(^1\).

\( snyw \) \( kprw \) \( n \) \( hcti \) "the kings who were before me"\(^2\),
or like a substantive:

---

\(^1\) Eb. 1, 13.  \(^2\) RIH 19 sq.
PARTICIPLES. 261.

mst t3y "one (fem.), who has born a boy".

sdmyw "the listeners".

mr n ivery rf "pain about that done to him."

A remedy m ivery n hōt of that which is made for the body.

A substantive or a suffix is often added to a passive participle, to indicate its logical subject (i.e. the one, from whom the action in question proceeds):

mry t3wi "beloved by the two lands".

s2f mryf "his son beloved by him".

The grammatical subject of a verb may also be retained, when it is put in the passive participle, cf. especially § 400 and examples like: irīl mrt rf in snf "He, to whom injury is done by his brother" (lit. factus malum contra eum a fratre).

---

1 Eb. 28, 16.  2 Prisse 5, 14.  3 Bauer 25.  4 Eb. 19, 11.  5 Merenre' 465; the whole according to Sethe.
A. The old expressions mr n "beloved of", ms n "born of", ir n "begotten of" are probably passive participles also.

b. THE INFINITIVE.

a. ITS FORMATION.

*262. The infinitive has different forms in the different verbal classes. With the following classes it has the vowel o after the first consonant, and no special ending:

II lit., wn "open" oγων (with suffixes oγον=);

III lit., sdm "hear" cωτμ (with suffixes cοτμ=);

IV and V lit., ηθητ (cf. κολκλα, with suffixes κλωλα=).

263. An o is found after the second consonant of some III lit. which denote a quality, like dšr τρω (for *tšor) "become red" and also of the II ae gem. of like meaning, like kmom "become black". Whether the infinitives of the other II ae gem. like wšš "urinate", are also to be vocalised thus, is uncertain.
The IIIae 3, according to the Copt. have for the most part an a after the second consonant in the infinitive: 

\[ w \, \dot{a}r \, \text{"be healthy"} \text{ O\textsc{yxai}, } \]

\[ s \, k \, \text{"plow"} \text{ C\textsc{ka}i}. \]

Certain infinitives, like 

\[ h \, h \, \text{"seek", } \]

\[ m \, n \, \text{"land"} \text{ (i.e. die, M\textsc{oon}e)}, \]

in careful orthography, end in ı.

The IIIae inf. have infinitives with feminine ending and the vowel i or e: 

\[ m \, s \, \text{"bear"} \text{ M\textsc{ice}, } \]

\[ p \, r \, \text{"go out"} \text{ N\textsc{ip}e, } \text{N\textsc{pp}e, } \text{N\textsc{irt} "make, do"}, \text{N\textsc{ipe}, } \text{N\textsc{hst} "descend" } \text{E\textsc{e} \&c.} \]

A few III lit. have likewise feminine infinitives, like 

\[ h \, m \, \text{"sit"} \text{ B. E\textsc{em}c\textsc{i}}, \]

as well as the irregular verbs 

\[ i \, t(?) "\text{come" und } \]

\[ r \, d \, \text{"give"}. \]

The causatives of the II lit. have likewise feminine nine infinitives (according to § 161): 

\[ s \, h \, \text{"overthrow" (from } h \, r \, "\text{fall"), } \]

\[ s \, m \, \text{"establish" from } m \, n \, M\textsc{oy}n "\text{remain") C\textsc{mine}. } \]

Among the causatives of the IIIae inf. are found 

\[ s \, m \, \text{"unbind", but also } s \, h \, \text{"cause to} \]
descend". — The causatives of the III lit. are classified with the IV lit. in the infinitive, \( \text{Heb.} \, \text{Gen.} \, \text{283} \) "set up", Copt. \( \text{冨} \) (from *so\( \text{Gen.} \)e\). 

**269.** The infinitive was originally a substantive with the general meaning of the verb. It therefore belongs to no definite voice of the verb and governs no object; "to kill him" is rendered in possessive form by \( \text{Heb.} \) "his killing" (cf. § 79), and \( \text{Heb.} \) \( \text{Heb.} \) "to kill the enemy" was originally undoubtedly a genetive, "the killing of the enemy". (cf. C§ 173.)

**270.** Of itself, \( \text{Heb.} \) "his killing" may also have the meaning "the killing, which he does", as in \( \text{Heb.} \) \( \text{Heb.} \) \( \text{Heb.} \) ms\( \text{Heb.} \) nds sdmf "an ear whose hearing is small"\(^1\) (i. e. a deaf ear), but such usage is practically rare (the substantivised form of § 283 is preferred in this case) and a possessive suffix on the infinitive is always first to be translated as the object of the latter.

**271.** The substantive character of the infinitive is evidenced also by the fact that a plural is made from it. In contrast with the singular it is best rendered by a substantive:

\(^1\) Eb. 91, 2.
Singular

\[ mst \] “to bear”

Plural

\[ mswt \] “birth”; ¹

\[ mrt \] “to love”

\[ mrwt \] “love”; ²

\[ ch\z \] “to stand”

\[ ch\cw \] “standing place”; ³

\[ hkr \] “to hunger”

\[ hkrw \] “hunger”; ⁴

With many verbs however, (e. g. those of going and of rejoicing) the plural infinitive is also used like the singular.

7. Its Use.

It stands, precisely like a substantive, as the subject of a sentence:

\[ nht\z \] (cf. § 43) ps

\[ irt \; nf \; st \] “My wish was to make it for him” ⁵ (irt is subject, cf. § 335),

or as part of the genitive relation:

\[ hrw \; n \; st \; tk3 \; m \; htr-ntr, \] “The day of the lamp-lighting in the temple”; ⁶

\[ st \; krs \] “place of burying”; ⁷

¹ Westc. 10, 8. ² LD II, 122a. ³ Westc. 6, 13. ⁴ LD II, 122b. ⁵ LD III, 24d. ⁶ Sitt I, 291. ⁷ Westc. 7, 8.

Erman, Egypt. gramm.
or for the qualification of an adjective (cf. § 118):

\[ nfr \textit{mdw} \] “excellent in speaking”.

273. Further, as object after verbs of willing, like

\[ wd \] “command”, \[ mr \] “desire”, \[ snd \] “fear”, as well as \[ kzd \] “think” and \[ rb \] “know, be able” (cf. C§ 314):

\[ wdtw \textit{nf} db\ast \textit{st} \] “It was commanded him to pay it”. Beside the above, the construction in § 189 is also in use with these verbs.

274. The infinitive may be dependent upon any preposition; with the more common prepositions these combinations have in part taken on special meanings, which are noted below:

275. The infinitive with \[ m \] “in”, denotes for the most part time,

“They were astonished \[ m \textit{lit} \] when they came”,

but nevertheless occurs with other meanings, e. g.

\[ \textit{sw \ m} \textit{irt isft} \] “free from doing sin”.

1 Peasant 75. 2 Peasant 48. 3 Prisse 2, 4. 4 Mar. Ab. II, 24.
With <<r "to", it almost always indicates purpose (as still in Copt. with ε cf. C§ 315):

\[
\text{hntf r shrt hftw} (\text{cf. } § \text{ 7}) \text{ "He sailed up to overthrow his enemies"},^1
\]

"He went >>r spr n mr-pr-wr to beseech the chief house-overseer".\(^2\)

In the common expression <<<r dd "in order to say" the idea of purpose had already disappeared in the m. e., so that it, (like its derivative χε, C§ 370), only indicates the beginning of direct discourse,

"I wandered through the camp h r nwm r dd: ihtw nn m\textit{?}, while I cried, 'How is this done?'".\(^3\)

With ^hr it denotes simultaneousness ("while")\(^*, 277*\).

\[
\text{ini hr šmsf "I went, following him"},^4
\]

\[
\text{gmnf sw hr prt "He found him going out" ("as he was going out")}.^5
\]

On the use of this combination as a substitute

\* Best rendered in English by the present participle.\textsuperscript{transl.}

1 LD II, 122a, 2 Bauer 33. 3 Sin. 202. 4 LD II, 122a. 5 Bauer 34.
for the pseudoparticiple with transitive verbs, cf. § 240. 242.

278. The prepositions ḫn n (the ḫ of good manuscripts) and mC, with the infinitive, denote cause:

"I lived, honored by the king mC ḫrt mCt n sn because I wrought truth for the king".¹

279. ḫnC "with" connects the infinitive with a preceding verb whose meaning it now adopts:

This method of continuation is especially preferred with imperative and optative expressions:

rf . . . ḫnC rdīt nf pḥrt "Make for it . . . and give him the remedy".³

280. An absolute infinitive is subjoined to a sentence for the addition of an explanation:

¹ Prisse 19, 8. ² Westc. 7, 3. ³ Eb. 40, 8.

She made (it) as her monument for her father Amon, having made two great obelisks for him”¹ (var. sChC “having set up”).

Cook (it) in water, without letting it seethe (?)”².

The logical subject may be added to an infinitive 281. (especially for the sake of intelligibility); in this case a nominal subject is introduced by the preposition in, but a pronominal subject is expressed by means of the later absolute pronouns of § 84:

“Agreement made with so and so

that (they) give him... and that they go out... and that the priest give...”.³

1 LD III, 24d. 2 Eb. 42, 7. 3 Siut I, 307.
feminine substantives by adding the substantive endings m. w, f. t, to their stem. The "substantivized" forms thus made, denote in part the action itself (the fact that he hears), in part a person or an object, to which the action has reference (he who hears, that which he hears and the like).

B. In the n. e. the substantivized forms have disappeared.

β. TO DENOTE THE ACTION ITSELF.

*283. The forms which denote the action itself, are especially:

\[ sadm^f \] "the fact that he hears",

\[ sadmt^f \] "the fact that he heard" (with the meaning of a perfect, cf. § 197).

The formation \[ sadmf \] of the first group (cf. § 172) is used in this case with the form \[ sadm^f \]; with the II ae gem. it is therefore \[ wnt^f \], with the III ae inf. \[ prtf \], with \[ ir \] "make, do" \[ ir^f \], with \[ rd^f \] "give" \[ rd^ftf \]. Only in the case of a future meaning do forms of the second group seem to be employed here, \[ tr n wnt^k \] "the time when you will be"\(^1\) (lit. "the time of the fact that you will be").

---

\(^1\) Prissse 10, 10.
These substantivized forms are treated precisely like substantives and are used with special frequency after prepositions, where we would expect a conjunction with a dependent clause. E. g.

\[ m \text{ mst s} \tilde{S}\text{w} \] “when she bore \$w”.

\[ \text{“on New-years-day } \text{ht} \text{ rd}\tilde{t} \text{ pr n nbf when the house gives (presents) to its lord”} \]

They gave him this piece \[ \text{ht} \text{ rdtnf nsn before he had given to them”} \]

Note, further, the absolute use of this substantivized form. If it follows a sentence, it adds to it an explanatory limitation:

\[ \text{“Agreement, that they give him a loaf } \text{rdtnf nsn } \text{hrs he, having given them ... for it”} \]

If, however, it precedes the sentence, it contains a temporal qualification:

\[ \text{rd\tilde{t} w}\tilde{t} \text{ n rdwii, } \text{dmi} \text{n } \text{inbw } \text{hk}^{3} \]

1 Eb. 95, 8. 2 Siut I, 289. 3 Siut I, 276. 4 Siut I, 274.
"When I had given the way to my feet, (i. e. fled), I came to the wall of the prince".1

287. It sometimes stands independently at the beginning of a text after a date, e. g. in \[ rnpt 18 \text{i}rt \text{hnf} t3\text{s} rs\text{i} \] 2. This is probably to be understood as: "In the year 18 (occurred) the circumstance, that his majesty made the southern boundary", i. e. "his maj. made the southern boundary."

288. As may be seen, the use of this form is for the most part, identical with that of the infinitive. In general they are distinguished as follows: the infinitive is used where its (logical) subject is identical with the subject of the preceding sentence, whereas the substantivized form is otherwise chosen. Thus, "They were astonished when they came" \[ m \text{iit}, \] but "I was astonished when they came" \[ m \text{itsn}. \]

7. TO DENOTE A PERSON OR AN OBJECT.

289. The substantivized forms which denote the person or thing to which the action of the verb has reference (he who hears, that which he hears etc.) are theoretically as follows:

1 Sin. 15.  
2 LD II, 136h.
Y. TO DENOTE A PERSON OR AN OBJECT. 290. 291.

m. sdmvf
f. sdmtf

m. sdmvnf
f. sdmtnf

in which the n-form is again used for the past.—The formation of the second group (§ 184) is used for the forms sdmvf and sdmtf (in contrast with the form of § 283); with the IIIae inf. it is therefore mrrtf, with ir “make, do” irrtf, with rdl “give” didltf.—In the case of the II lit. and III lit. as well as with all verbs in the n-form, these substantivized forms are not to be distinguished from those of the first kind.

On the use of these forms in relative sentences 290. cf. § 394. Certain of them are furthermore employed with definite meaning, precisely after the manner of real substantives as subject, as object, in the genetive, or after a preposition.

The forms sdmtf and sdmt nf with the meanings “that which he hears” and “that which he heard” are the most frequent:

nfr irrt nk “That which I do thee is good”.¹
mr innt hcp “Overseer of that which the Nile brings”.²

¹ Sin. 77. ² LD II, 149c.
According to that which he had said about it" (while he was still living).—The not infrequent masculine "that which they give" is noteworthy.

The form $sämnf$ denotes persons and is used almost only with nominal subject:

$hssh nbf"he whom his lord loves".$

$wnnw sndf ht smwt "he, whose fear comes after the lands."$

The archaic forms:

Sg. m. $sämtiśī$, f. $sāmiśī$,

Pl. $sāmiśn$

almost always mean "he (she), who will hear" and are employed both as adjectives and substantives:

$sāl nb srwdtīśī ỉš p̄n "every son of mine who shall make this boundary increase".$

"as something brilliant (i. e. useful) for him who will hear it".$

---

1 LD II, 34d. 2 Sin. 187. 3 LD II, 113f. 4 Sin. 44
5 LD II, 136h. 6 Prisse 5, 8.
In classic orthography, the endings are for the most part written:

Sg. m. $\text{\textcopyright$ or $\text{\textcopyright$, f. $\text{\textcopyright$  

Pl. $\text{\textcopyright$ or $\text{\textcopyright$  

in the singular, however, $\text{\textcopyright$ or $\text{\textcopyright$ also occur.

In respect of the formation, it is to be noted, that the II$\text{ae gem.  always double the second radical,}

\text{\textcopyright$  

the III$\text{ae inf. in part take } \text{\textcopyright$ for the ending of the stem, $\text{\textcopyright$ (cf. § 151 A); ir "make, do" has $\text{\textcopyright$;}

$\text{\textcopyright$ "give" has $\text{\textcopyright$.

11. APPENDIX TO THE VERB; THE OBJECT.

The direct object (accusative) is to be recognised only by the order of words, cf. § 337 sq. If it is a pronoun it is always expressed by the old pronomina absoluta, cf. § 30.

On account of its substantive character, the infinitive could not originally govern an object; it is

---

1 Mar. Cat. d'Aby. 807.  
2 Sin. 75.
therefore, according to § 269, combined with the possessive suffixes, ṅmrτf “for his loving”, i.e. “in order to love him”. Only the neuter pronoun इ “it” (cf. § 82) can also follow the infinitive, ṅmrτ इ “in order to love it” (them).

298. Transitive verbs which have no special object, are often followed by the word ṽ iht “thing” as a general object, not to be translated by us. Note especially:

\[\text{र्यूिह्त “the one knowing (something)”}^{1}\]
i.e. the wise man,

\[\text{िर्यूिह्त “to do (something)”}^{2}\]
for the god,
i.e. to make offering.

299. The indirect object (dative) is expressed by means of the preposition एन (cf. § 306), which by good manuscripts, is written —, before substantives.

PARTICLES.

1. ADVERBS.

300. A special adverbial formation does not exist. Beside the prepositions (cf. § 303) and absolute substantives (cf. § 117), the adjectives are used as adverbs, thus:

\[1\text{ Sint I, 223.} \quad 2\text{ Sint I, 271.}\]
1. With the preposition *r*, in the masculine or feminine:

- \( r\text{ mnh} \) "excellently",\(^1\)
- \( r\text{ st} \) "very".\(^2\)

2. Alone, in the masculine; or more rarely, in the feminine (especially with the intensifying \textit{wrt} "very"):

- \( \text{iwf}\text{ h}\text{sf}\text{ s}\text{ st} \) "He vomits often".\(^3\)
- \( \text{C}\text{n}\text{ w}\text{ rt}\text{ very s} \text{orely} \).\(^4\)

2. PREPOSITIONS.

\textit{a. IN GENERAL.}

The prepositions are in part simple (\textit{m} "in", \textit{hnC} 301. "with"), in part compound (\textit{m s}\text{ s} \text{ st} "in the back", i.e. "behind"). Since they were originally substantives, as is still clear in the case of many, they are combined with the possessive suffixes (\textit{hrf} "upon him" lit. "his face").

They are in part employed like conjunctions also, 302. that is to say, verbs may be dependent upon them. Cf. § 190 and for details § 306sq.

\(^1\) Eb. 66, 18. \(^2\) Eb. 37, 20. \(^3\) Eb. 37, 17. \(^4\) Peasant 25.
303. They are very often used as adverbs also, i. e. with the suppression of the suffix, which, according to the connection, they should properly have, e. g. referring to bw "place": šmnf ʾim "he had gone into" ("into" for ʾimf "into it").

304. The prepositional phrase (i. e. the preposition and the word dependent it) is frequently subjoined to a substantive, where we would employ a relative clause or an adjective. Note especially the expressions for "entire" (cf. C§ 152):

\[ t\ddot{s} pn r \ddot{d}rf "this land up to its boundary", \]
i. e. "this entire land".

\[ gswï ml \ddot{k}dsn "the two sides according to their extent", \]
i. e. "the entire sides".

305. The prepositional phrase is sometimes treated like a substantive also, e. g. \[ hswï nt \ddot{h}r \ddot{s}tn "the rewards of the with-the-king", \]
i. e. the rewards on the part of the king.

b. SIMPLE PREPOSITIONS,

306. \( n \) is pronounced before nouns, something like \(^*_{c}n\), with suffixes \(^*na-\) (cf. C§ 349); manuscripts dating from the end of the m. e. and the beginning of the n. e. distinguish each as — (\( ^*n \)) and —

---

1 Prisse 2, 7. 2 Una 14. 3 Sin. 310.
(na-).—The original meaning is “for the advantage of any one”; in particular it then means:

1. to do something for some one, to bring or give something to some one, to say something to some one (dative),
2. to come to some one (only with persons),
3. because of a thing,
4. in a period of time.

As a conjunction and before the infinitive (cf. §278) it means “because”, “because of”.

\[m\] is pronounced before nouns something like 307*.

\[\text{**m, before suffixes } \text{**imo-}\], written \[\text{Im-}\] (cf. C§ 350).—The original meaning is “within”, without any accompanying idea of direction; it is used in particular:

1. of place; existent in, into something, out of something (inexact for “at”);
2. of time, in the year, on the day and the like;
3. among a number, belonging to something, consisting of something, made out of something; provided with something, empty of something;
4. in the capacity of, as; in the manner of, like; according to a command;
5. in a condition;
6. after the verbs “to be” or “to make (into) some-
things", | "He is a citizen"  
7. occasionally for the introduction of direct discourse, where it remains untranslated;  
8. by means of a tool.

On \( m \) before the infinitive cf. § 275. As a conjunction it means "when" and "if" (§ 391). As an adverb it has the form \( \text{by means of} \) and means "therein (there), thereinto, thereout, therefrom, therewith (by means of)"; it is also joined to a substantive, e.g. \( bk \ im \) "the servant there" (humbly for "I").

\[ \text{*308} \]

\( \text{(*c}r, \text{with suff. *erof, cf. C§ 348) originally meant "at" or "by" something, without any accompanying idea of direction. Its usual meanings are:} \]

1. existent \( at \) or \( by \) something;  
2. thither \( to \) something (the most frequent meaning); \( into \) something (inexact for \( m \)); \( as \) \( far \) \( as \);  
3. to speak \( to \) some one;  
4. hostile \( toward \) some one (in contrast with \( n \);  
5. distributively of time, "per day", "every four days" and the like;  
6. especially after adjectives "more than", where we

\[ \text{1 Westc. 7, 1.} \quad \text{2 Sin. 175.} \]
would employ our comparative, \( nfr r \textit{jht nbt} \) "more beautiful than everything".\(^1\)

As a conjunction it means "until" and "so that"; on its use before the infinitive cf. § 276. Cf. also § 253.

A. In the pyr. it is also written \( \Gamma \), with or without the suffix.

\( hr \) (lit. "face"), with suffixes is written \( \mathbb{R} \).

\( hr^{-} \) in correct orthography (C§ 351), and means especially:

1. existent upon something (the most frequent meaning); also in inexact specifications of place and time, in the north and the like, at the time of and the like;

2. down upon something, in addition to something;

3. to pass by something, to deviate from something, and the like;

4. distributively, upon each one;

5. anoint, cook &c. with something;

6. pleasant for the heart, and the like;

7. because of something (frequent).

On its use in the co-ordination of substantives cf. § 120; on \( hr \) with the infinitive cf. § 277. As a conjunction it means "because".

---

\(^1\) Westc. 12, 8.

E r m a n , E g y p t . g r a m m .
*310. **hr**, lit. "under" (also of direction), is also used of being laden (because the bearer is under the burden) and therefore often means "carrying or possessing something". Cf. C§ 352.

311. **hr**, originally, existent with some one and the like; also, to receive something from some one; it is obsolete and still used almost only in specifications of reigns (under King X.).—On its use in the passive cf. § 169.

312. **mC** (perhaps arising from mC "in the arm") means:

1. in the possession of;
2. take something from some one, receive from some one, and the like; rescue from some one;
3. something is done by some one;
4. because of a thing.

On mC with the infinitive cf. § 278.

313. **hft** (on orthography cf. § 7) originally meant "in front of", but is for the most part employed for, according to, corresponding to and also for, simultaneously with.—As an adverb it means "in front", as a conjunction, "when".

Note further the simple prepositions:
c. COMPOUND PREPOSITIONS. 314. 315.

Many prepositions are compounded with a substantive (usually the name of a part of the body). Note especially:

$m\text{ isw}$ (as compensation), “as reward for”.

$r\text{ C/h;3} “opposite”.

\[ \text{Imitw (in the pyr. } \text{Imw}t\text{), “between, 314. in the midst of”}. \]

\[ \text{In only for the expression of the subject with the passive and the infinitive. Cf. } \S 169. \]

\[ m\text{ (in the pyr. often } \text{mr} “like”. As a conjunction, “as, if” (cf. } \S 391. \]

\[ \text{H3 (lit. occiput), “behind”.} \]

\[ hnc “together with”.—Cf. also } \S 120; \text{ with the infin. } \S 279. \]

\[ \text{Hnt (lit. nose) “before” (rest or motion); as an adverb, } \text{Hntw “before”}. \]

\[ tp (lit. head or the like) “upon”; it is obsolete.} \]

\[ \text{Dr “when, since”}. \]
$m\ b\hbar$ ("in the foreskin", cf. C§ 359), "before some one" (also as an adverb).

$\partial\ r\ b\hbar$ as an adverb, "formerly".

$m\ m$, $m\ m$ "among persons".

$n\ mrvt$, in the m. e, "(for love), often as a conjunction, "in order that".

$m\ hct$ (cf. C§ 356), $hr\ hct$, "at the summit"; $hr\ hct$, as an adverb, "formerly".

$m\ hr$ "in front of", $hft\ hr$ "in front of".

$m\ hr-\hbar$: "in the midst of".

$m\ hnw$ "in the inside of" (cf. C§ 357),

$m\ hht$ "behind, after"; as an adverb, "afterward"; as a conjunction, "after" (cf. § 244, 385).

$s^3$ ("in the back") $r\ s^3$, $hr\ s^3$ "behind, after"; $r\ s^3$, is also used as a conjunction, "after". As an adverb "afterward", $r\ s^3$, $hr\ s^3$ are used, also $n\ s^3$. 
m kꜵb (“in the entrails”) \(^1\) “in the midst of”.

\( r \) gs (“at the side”), \( hr \) gs: “beside”.

\( mdi \) “together with”; in the m. e. very rare, in the LE. frequent cf. (C§ 359. 338).

\( r \) ḏrw (“up to the boundary”), “as far as”.

\( ḥr \) ḏꜵd (“upon the head”), “upon” cf. C§ 361.

With others, there is prefixed to the preposition, 316. a word more exactly qualifying it; thus in:

\( wpw \) ḥr “except” (also for “but” conjunction), and the old \( wpw \) r “except”.

\( ḥrw \) r “apart from”.

\( nfryt \) r “as far as”.

\( tp \) m “before some one, something”; as an adverb according to § 307 \( tp ḳm \) “formerly”.

Finally, there are such peculiar formations as: 317.

\( r \) ḫw (“in order to separate”), “between” (cf. C§ 354).

\(^1\) Brugsch, Wb. Suppl. s. v.
3. CONJUNCTIONS.

a. IN GENERAL.

318. The conjunctions are in part enclitically joined to the first word of the sentence, in part appear at its beginning also. On those prepositions which are used as conjunctions, cf. § 302. 306 sq.—Apart from the conjunctions noted in the following, there are others which are treated elsewhere, thus § 257. 348. 349, § 347, § 121, § 363.

b. ENCLITIC CONJUNCTIONS.

319.  is serves for the most part (like our "namely") to introduce an explanatory addition:

"I made it for him ... (I) the king ...".  

1 LD II, 124, 35.  2 LD III, 24d.
On the other hand ° n is means "but not", as a restricting adjunct.

A. In the pyr. this is is very frequent; on the is of the later language cf. § 323 B.

swt and hₐm (like our "but") ex-press the opposite of that which precedes:

“All men who injure the tomb, who &c. ir swt rm₂t (cf. § 97) nbt but all men (who preserve it, who &c.).”¹

But this contrast is sometimes so weak that these conjunctions really serve for the attachment of the clause only.

grt, also properly means "but", e. g. “If the eye bleeds, then . . . ir grt h₃ mw ḫms but if water comes out of it &c.”²

As a rule, however, it joins an explanation or a continuation, like “further” or our weaker use of “but”:

“This plant is employed so and so, lw grt prts ḫtw ṯs but its fruit is laid upon bread &c.”³ (or “Further, its f. is laid upon b.”).

¹ Siut I, 225. ² Eb. 56, 8. ³ Eb. 51, 18.
Rarer conjunctions of this kind are:

1. The archaic $m\text{C}^1$, which seems to introduce the sentence as the result or consequence of that which has been previously narrated;

2. $ms$ in direct discourse; designates that which has been stated as something self-evident or well known.

c. CONJUNCTIONS NOT ENCLITIC.

$\text{Ιστ}$, $\text{ιστ}$ (older $\text{Ιστ}$) specifies the circumstances under which anything happens:

$\text{ιστ}$ $w\text{ι} m s\text{α}b \ldots$, $\text{ρδι} w\text{ι} h\text{n}f m \text{smr} "\text{I was judge . . . , then his majesty made me friend}"$ (i. e. when I was j., his maj. made me f.).

$\text{ιστ}$, is especially used, where these circumstances are to be emphasized as remarkable.

Since the m. e. it is employed for the introduction of parenthetical or incidental remarks, especially with following $\text{rf}$ (cf. § 348, 349):

$\text{ιστ} \text{rf} \text{δδν} \text{sht} \text{πm} "\text{this peasant said} (this) \text{however, at the time of} \text{king Nb-ks}^2$."

---

1 Una 5. 45. 2 ib. 8. 3 Bauer 71.
A. The pyr. use *ist* enclitically also, cf. § 120 A.

B. In LE it is written *istw*; the late Egyptian *is* also, Copt. *El*- seems to have arisen from *ist*.

ções (older *esk* mostly designates 324. (like the more frequent *ist*) the circumstances under which, or the time at which something occurs:

“He erected this tomb for his son *sk sw m *yr when he was a child”.¹

*y*r originally introduced a substantiating clause (like for or because). Then, with much weakened significance, it also introduces new paragraphs of a narrative and precedes especially temporal clauses:

hrw sw² *hr* *nn* “Now, after the days had passed by this, then &c.”²

B. In LA *hr* is very frequent, with many varied meanings.

³ *k3* is used in promises, threats and directions, in order to strengthen that which is stated:

³ *rdll hpr mw* “Surely, I will cause water to be”.³

¹ Mar. Mast. 200. ² Westc. 12, 9. ³ ib. 9, 17.
Occasionally it receives the suffix of the 2 m.: k3k 3ckk "Thou shalt throw".  

A. In the oldest language k3 is also used enclitically.

THE SENTENCE.

1. THE NOMINAL SENTENCE.

a. THE SIMPLE NOMINAL SENTENCE.

By the (pure) nominal sentence is understood a sentence without a verb, whose predicate is then a substantive, adjective or prepositional phrase, while its subject is a noun or absolute pronoun. The subject precedes the predicate.

It is used in assertions: lmnk nb lmst "I am the lord of graciousness";

r nk nfr "Thy name is beautiful";

and is especially frequent after mk "behold" (§ 183), where the old pronouns of § 80 are then employed as subject:

m b3hk "Behold I (am) before thee";

---

1 Westc. 3. 3.  2 Louvre C 172.  3 Prisse 5, 14.  4 Sin. 263.

mk nn

n ithw ... hmr st hmrk "Behold these things . . . are under thy charge"\(^1\) (lit. are under the place of thy face).

It is, further, often used in descriptions:

329.

\[ \text{dfr nb hmr htwf} \] "All fruits are upon its trees"\(^2\),

and often also as a relative clause (cf. § 393):

\[ \text{s, stt m nhbf} \] "A man on whose neck are swellings".\(^3\)

Occasionally, in violation of the rule, the predicate precedes the subject; the predicate is thereby emphasized. Thus:

1. in expressions with \(rn\) "name", like \[ \text{sm, snwt rns} \] "an herb whose name is Snwtt"\(^4\) (for: \(rns\) snwtt);

2. when the subject is a demonstrative or an absolute pronoun: \[ \text{dpt mwt nn} \] "This is the taste of death".\(^5\)

\[ \text{n rmft is nt šft st} \] "They are not people of strength".\(^6\) (for: \(nst\) rmft nt šft).

---

\(^1\) Siut I, 269.
\(^2\) Sin. 83.
\(^3\) Eb. 51, 19.
\(^4\) Eb. 51, 15.
\(^5\) Sin. 23.
\(^6\) LD II, 138 h.
This inverted order is especially frequent, where the predicate is an adjective:

\[ nfr \, mtn\, \, "My \, way \, is \, good". \]

In this case the adjective often receives an ending \( w\), which perhaps lends it a special emphasis:

\[ nfrw\, h\, \, "How \, beautiful \, is \, thy \, face!" \]

A. In the pyr. this ending is written \( \) or \( \).

The nominal sentence is sometimes introduced by the auxiliary verb \( i\) "to be" (cf. §§ 220sq. 246sq.), especially when the predicate is a prepositional phrase:

\[ mw \, "His \, one \, way \, was \, under \, water". \]

B. In the popular language of the m. e., the pronouns, where they would stand as the subject of a nominal sentence, are superceded by the forms of this verb: \( i\) for \( in\) \&c.

---

1 Bauer 3.  
2 Butler 16.
More rarely it is introduced by the auxiliary verb 333. wn (cf. § 223, 250 sq.) as e.g. in wn in nfr st hr ibrn "It was good for their heart",¹ (for st nfr cf. § 330, 2), where wn in precedes.

Sentence like RC pw "It is ReC",² 334. A³状 pw "It is Bast",³ hwrw pw "They are paupers",⁴ properly have as subject, the demonstrative pw "this", which follows the predicate according to § 330, 2; but this pw is now weakened to an unchangeable word having the meaning "he", "she", "it" or "they". — If the predicate is a long expression, pw may be inserted within it: phrt pw nt wn-m³C "It is a remedy of truth"⁵ (cf. § 103).

B. This pw is already superceded by the demonstrative p3i, t3i, n3i in the LE; the similar word IE, TE, NE probably arose from this.

This construction is then used to emphasize the predicate of a nominal sentence; in order to render

¹ Prisse 2, 6. ² Mar. Ab. II, 25. ³ ib. ⁴ LD II, 136h. ⁵ Eb. 75, 12.
emphatic the word \(\text{iht} \) "horizon" in \(\text{ipt \ iht} \) "Karnak is the horizon", the sentence \(\text{iht \ pw} \) "It is the horizon" is first made, and \(\text{ipt} \) then follows as apposition to \(\text{pw \ it}\): \[\text{iht \ pw \ ipt} \) "It is the horizon, viz. Karnak",\(^1\) i.e. "The horizon is Karnak".

2. THE PARTS OF THE SENTENCE.

a. THE ORDER OF WORDS.

336. The order of words is to be especially noted, for it is often the case, that it alone indicates how a sentence is to be analysed.

337. The sentence is divided into two parts: one preceding, containing the verb, subject, direct and indirect object; and one following, containing specifications of time and place and the like.

*338. In the preceding part of the sentence the order is in principle: 1. verb, 2. subject, 3. direct object, 4. indirect object (cf. § 299). E.g. \[\text{rdin stn nb n bkf} \) "The king gave his servant gold".

*339. But if parts 2—4 are partly substantives and partly pronouns, the pronouns precede the substantives. E.g.

\(^{1}\) LD III, 24d.
rdin nē stn nb "The king gave me gold".

rdin sw stn n bkf "The king gave it to his servant".

rdinf nē nb "He gave me gold".

If both objects are pronouns, the indirect precedes 340* the direct, that is, the pronominal suffix precedes the absolute pronoun:

rdin nē sw stn "The king gave it to me".

rdinf nē sw "He gave it to me".

Except for the sake of emphasis (cf. § 343 sq.) the 341. above laws are inviolable; under certain circumstances, however, for stylistic purposes, an expression which belongs in the latter part of the sentence, may be inserted by exception, in the part which precedes:

rdinē sw3 ħrr ġḥ3wnf "I caused that his weapons pass by me"¹ (for sw3 ġḥ3wnf ħrl).

A vocative stands as a rule at the end of the 342. sentence:

¹ Sin. 136.
IN GENERAL.

Emphasis consists in placing before the sentence, a word to which it is desired to attract attention, and as a rule resuming it by a pronoun in the sentence. It is very frequently used and often contrary to our sense; thus, e. g. the word 'king' is often emphasized without reason.—Cf. also § 330. 331. 335.

WITHOUT INTRODUCTION.

The original method of emphasis leaves the emphasized word without further introduction, e. g.:

1 Bauer 11. 2 Bauer 74.
§ 345. Without introduction.

\[ \text{hst} \text{ e phs pt} \] "My praise, it reached heaven" \(^1\) (for \( \text{ph hst e pt} \)).

\[ k\text{tnf irt st rl n} \text{ n} \text{ st rf} \] "That which he had thought to do it to me, I had done it to him" \(^2\) (for \( \text{nl kn} \text{ n} \text{ ktnf irt st rl rf} \)).

\[ \text{smt nbt rwtn n} \text{ rs, lw n} \text{ nl hd lms} \] "Every land to which I went, I was a hero (?) therein" \(^3\) (for \( \text{nl hl m} \text{ n} \text{ n} \text{ nbt, rwtn n} \text{ rs} \)).

The resumptive pronoun is occasionally omitted, \(^4\)

especially in poetry:

\[ m \text{ trw swrf, mrk} \] "The water in the stream, he drinks (it) if thou wishest." \(^5\)

If the sentence has one of the compound verbal forms as its verb, the auxiliary verb with which it is formed, stands before the emphasized word:

\[ \text{chn hn n stn bll} \ldots \text{ mmn} \] "The majesty of the king of upper and lower Egypt \ldots expired." \(^6\)

---

\(^1\) LD II, 122a. \(^2\) Sin. 144. \(^3\) Sin. 101. \(^4\) Sin. 233. 
\(^5\) Prisse 2, 8.
Erman, Egypt. gramm.
The heart of his majesty was sad concerning it.¹

"All that his majesty commanded me, I entirely completed".²

Cf. also § 228.

347. The emphatic particle ird ird is used with every kind of sentence; the resumption of the emphasized word by means of a pronoun is only occasionally suppressed, in the case of the subject of a nominal sentence, e.g.

sdm st "All that is written, hear it"³

r 360 pw n rnpt "A temple-day, (that) is 1/360 of the year".⁴

Here also, an auxiliary verb is treated according to § 346.

B. This construction is still regarded as ceremonious in the m. e. (often in legal style); but in the n. e. it superceded all the other methods of emphasizing.

¹ Westc. 9, 12. ² Una 42. ³ Prisse 2, 4. ⁴ Siut I, 300.
The emphatic word \( \text{\textbf{\textit{irf,}}} \) which, in many texts (like that of § 349), is written \( \text{\textbf{\textit{rf,}}} \) follows the word to be emphasized \( \text{\textbf{\textit{dsk \ irf}}} \) "thou thyself".1

It is often used in interrogative sentences (cf. § 356) and with imperatives and optatives; in the last case it often still has the archaic form \( \text{\textbf{\textit{rk}}} \) (cf. A):

\[
\text{sdmw \ irf \ in \ "hear ye"},^2
\]

\[
\text{dik \ rk \ ni \ "give me"}.^3
\]

A. In the pyr. this \( \text{\textbf{\textit{ir}}} \) takes the suffix corresponding to the subject of the sentence: \( \text{\textbf{\textit{ir}}, \text{\textbf{\textit{irk}}, \text{\textbf{\textit{irf}}, \text{\textbf{\textit{irs}}}}} \).

That \( \text{\textbf{\textit{rf}},} \) which is added to the verb (especially those of going) at the beginning of short sections seems to be different from \( \text{\textbf{\textit{irf, rf}}} \):

\[
\text{\textbf{\textit{han rf t}}} \text{\textsuperscript{2}} \text{"The earth became light"},^4
\]

\[
\text{\textbf{\textit{\Lambda \ inin rf sh\textsuperscript{i}i pn}} \text{"This peasant came"}.^5
\]

A. This \( \text{\textbf{\textit{r}}} \) had originally changeable suffixes also.

The subject of a sentence is often emphasized by 350.

---

1 Westc. 7, 8. 2 LD III. 24 d. 3 Peasant 29. 4 Sin. 248. 5 Peasant 52.
means of  \( \text{in} \) (old writing  \( \text{in} \)); the resumptive pronoun is for the most part omitted as self evident:

\[
\text{in} \ \text{hfnf rd\( \text{er} \text{rtf} \) "His majesty caused that it be made"}^{1} \text{ (for \( \text{in} \ \text{hfnf rd\( \text{er} \text{rtf} \).}}
\]

If the subject to be emphasized is a pronoun, the pronouns  \( ntk, ntf \&c. \) are substituted for  \( \text{in} \) and the pronoun according to § 84:

\[
\text{ntf s\( \text{m} \) \( \text{nl} \) "It is he who leads me"},^{2}
\]

\[
\text{ntsn \( \text{irs} \) \( \text{nl} \) "It is they who do it for me"}.^{3}
\]

B. In LE this  \( \text{in} \) is written:  \( \text{en} \) (i. e.  \( \text{en} \) according to late pronunciation).^{4}

c. THE ELLIPSE.

351. The frequent ellipses (i. e. the omission of effective words as dispensable) often render the understanding of the text very difficult. They are found first of all in the parallel members in poetry, where, in the second member, one or more identical words are suppressed:

\[
1 \text{ Sin. 308.} \quad 2 \text{ LD III, 24d.} \quad 3 \text{ Siut I, 289.} \quad 4 \text{ Sethe.}
\]
"Establish my name in the mouth of your servants, (Establish) my memory with your children".¹

"Turning his countenance to him who speaks truth, (turning) the back of (his) head (to) those who speak lies".²

Similar is the ellipse in comparisons, where it is found in the second compared member:

"He rejoices (lit. broadens) the heart of the servant there (i.e. mine) like (the heart of) the prince of any land".³

When several successive verbs have the same subject, the latter is sometimes written with the first only; thus in animated narrative:

"innl hrwsn, pr r ynmwtsn, hw k3wsn, wh3 ltsn, rd3 sdt lm "I captured their women, I led away their people, went to their wells, slew their steers, cut down their barley, set fire thereon".¹

354. An object may likewise remain unexpressed, where it is clear from that which precedes. Thus, e. g. "He stole his ass, he drove (him), (← sȝk for sȝk sw, with accompanying ellipse of the subject) into his village".²

"She takes Egypt like the god 'Ir-sn — shprnf (for shprnf sï) r ws hCnft he created (her) to wear his diadem (lit. to lift up)".³

355. Another form is the ellipse of dd "say" in expressions like:

ē hrtw "it is said".⁴

i in RÇ "saith Re", i insn "they say",

ntrw hr "the gods say"⁵

These stand für ddhrtw, ddinsn, ntrw hr dd.

B. is later written for inf.

¹ LD II, 136 h. ² Peasant 24. ³ LD III, 24 d. ⁴ Eb. 9. 20. ⁵ Stele from Kuban.
3. KINDS OF SENTENCE.

a. INTERROGATIVE SENTENCE.

The indication of the question by the accent alone is very rare; as a rule it is externally marked. Frequent emphasizing whether of the verb or of the interrogative particle, is characteristic of the interrogative sentence.

If the sentence contains no special interrogative, it is introduced by means of or

\[ \text{in } \text{iw:} \]

\[ \text{in } \text{tw} rf m \ldots tf \] "Shall I be robbed upon his land (?)?".

\[ \begin{array}{c}
\text{in } \text{iw } \text{m} \times t \text{ pw} \\
\text{"Is it truth?"}
\end{array} \]

B. \text{in } \text{iw} is perhaps preserved in \text{EN}, cf. C§ 394.

As a rule, the interrogatives stand at the end of the sentence (cf. C§ 392). The most common interrogative pronoun is \[ \text{ml(?) } m? \] cf. on the reading, § 34) "what?, who?":

\[ \text{phnk } nn \text{ hr } m? \] "Why (on account of what) have you reached this (place)?"

\[ \text{irtw } nn \text{ ml } m? \] "Like what is this done?"

1 Peasant 18.  2 Westc. 8, 3.  3 Sin. 35.  4 ib. 202.
B. In LE. $m$ is already superceded by \( \text{\textit{ilj}} \text{\textit{aw}} \) "what?"; cf. C§ 60.

359. as subject with the meaning "who?", is usually emphasized by \( \text{\textit{in}} \) (cf. § 350):

\[ \text{\textit{in}} \text{\textit{m dā sw}}? \text{"Who says it?"} \]

\[ \text{\textit{in}} \text{\textit{m ērīf ērīf sw}}? \text{"Who brings it?"} \text{ (with double emphasis).} \]

B. This \( \text{\textit{in}} \text{\textit{m}} \) is already written \( \text{\textit{nīm}} \ "who" \text{\textit{nīm}} \) (cf. C§ 60, 2).

360. Other old expressions for "who?, what?" are \( \text{\textit{ist} st and \text{\textit{isy} (?)}} \). Cf. e. g.

\[ \text{\textit{ist} st pw} \text{"What is it? who is it?"} \]

\[ \text{\textit{is} st (?)} \text{ pw} \text{"Who is it?"} \]

Here belongs also \( \text{\textit{is} (?)-nw} \text{"When?"} \) (lit. "What of the time?").

361. The interrogative for "where?" is \( \text{\textit{iw ērīf} fn} \). Cf.:

\[ \text{\textit{iw ērīf} fn} \text{"Where is it?"} \text{ (with emphasis).} \]

\[ \text{\textit{irt r} fn} \text{\"Whither goest thou?"} \text{ (lit. "Toward where makest thou";} 2 f. sg.)

\[ ^1 \text{Math. Hdb. 35.} \]
\[ ^2 \text{Eb. 58, 10.} \]
\[ ^3 \text{Math. Hdb. 30.} \]
\[ ^4 \text{Sin. 35.} \]

b. NEGATIVE SENTENCES.  a. WITH n AND nn. 362—364.  153

A. In the pyr. it is written, tni, tn, and even without a pre-
position, means "whither?, whence?"

B. In LE. tnw, Copt. TΩN. Cf. C§ 364.

The common word, archaically written □□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□...
ciation was perhaps approximately \( n \) and \( nn \) or similar.

A. In the pyr. both forms are written \( n \).

B. LE. always has \( nU \); in Copt. the negation is preserved as \( N- \). (Cf. C§ 389).

365. \( n \) is used with the verbal form \( samf \), in so far as it is not future in meaning, and always with the \( n \)-form:

\[
\text{\( n \) rh\( i \) sw} \quad \text{“I know him not”}.\]

“Lay this upon the snake’s hole, \( n \) pr\( n f \) \( im \) then it will not come out”.

366. however, is used with the form \( samf \), when it has the meaning of a future (that is, belongs to the second group, cf. § 184sq.):

\[
\text{\( n \) p\( ssf \) “He shall (will) not divide”}.\]

367. Before the absolute infinitive (cf. § 280) is used. Especially frequent in this case is \( n \) \( rd\( l \)t “without giving, without causing”:

\[
\text{\( w\( d\)c, } \text{nn \( rd\( l \)t hr gs “Judging, without putting upon one side” (i. e. without being partisan).}

\[1\text{ Sin. 114. } 2\text{ Eb. 97, 19. } 3\text{ Siut I, 311. } 4\text{ LD II, 149e.}\]
b. NEGATIVE SENTENCES. a. WITH n AND nn. 368—370. 155

"Set it where it is cool and without permitting the sun to see it".¹

In this combination, rdît has sometimes lost its causative meaning, and only means "without" (e.g. nn rdît psšf st² "without his dividing it").

— stands before the nominal sentence, and in 368. this case when the subject is a pronoun, the later absolute pronouns are used (cf. § 84):

\[ n ntw pw m m\text{\textasciitilde{c}}t \text{"It is not really he".}³ \]

— however, is very frequently used with a following noun or old absolute pronoun (cf. § 80) for "it does not exist". — nn wn also appears with the same meaning:

\[ nn mw im, nn wi \text{im "There is no water there, I am not there".}⁴ \]

\[ \text{wsht, nn hms "A ship which has no rudder".}⁵ \]

Note further the combinations — n is "but not" and — n grt "however not" (weaker than the former):

¹ Eb. 43, 17. ² Siut I, 272. ³ Sin. 267. ⁴ Eb. 69, 6. ⁵ Sin. 13.
a. WITH n AND nn. β. THE CIRCUML. WITH im-, m, tm-. 371—373.

n ws' is pw “It was narrow, but it was not wide”.¹

“His skin grows, n is wrt but not much”.²

n sp means “never”:

h3 mlLF hr smt tn dr rk ntr “One like him never came down in this land, since the time of the god”.³

A. In old texts, the subject of such a sentence is often emphasized by means of the demonstrative p3, l. p3t: n sp p3t irt mitt “The like was never done”.⁴ nct sp with an old negative irt also occurs (cf. § 378).

A strengthening of the negative, probably obsolete in the classic language, is found in nfr n:

in nfr n wnn mltn “If it is not in your possession”.⁵

nfr n irt mitt “Never was the like done”.⁶

β. THE CIRCUMLOCUTIONS WITH im-, m, tm-.

The usual negatives are avoided with certain forms of the verb, and replaced by circumlocutions

¹ Butler 15. ² Eb. 104, 8. ³ LD II, 149e. ⁴ Una 37. ⁵ Grébaut, musée Egyptien, pl. 18. ⁶ Mar. Mast. 390.
with the obsolete verbs \( \text{\textit{im-}} \) and \( \text{\textit{tm-}} \). These are followed by a (participial?) form of the verb, in which the II\ae gem. are doubled, the III\ae inf. are not doubled and \( rd\ell \) "give" has the form ___.

\( \text{\textit{im}} \) is used when the verb to be denied is 374. optative or final in meaning and has a pronominal subject:

"Treat it with cold \( \text{\textit{imf}} \) \( \text{\textit{smm}} \) that it may not become hot."\(^1\)

\( \text{\textit{imk \textit{ir \textit{ibt rs}}} \) "Do not do anything for it".\(^2\)

The imperative of the old verb, which is written 375. \( \text{\textit{m}} \), serves for the negation of imperatives and optatives with a nominal subject:

\( \text{\textit{m \textit{C}b\text{\textit{k}}} \) "Let not thy heart be proud".\(^3\)

\( \text{\textit{m \textit{ChC r\textit{im}}} \textit{mtrw} \) "Do not stand against me as a witness".\(^4\)

A. In the pyr. it is written ; they have also a plural .

---

1 Eb. 91, 6.  2 Eb. 110, 3.  3 Prisse 5, 8.  4 Totb. ed. Nav. 30 A 2. B 3.
B. Instead of m the language of the n. e. employs the circumlocution \textit{m ir “do not"}, from which arose the Copt. 

376. \textit{tm-}, the use of which is more extended, is found, among other uses, in the conditional sentence:

\begin{verbatim}
\textit{ir tmf w$s st “If he does not discharge it”;}\footnote{1 Eb. 25, 7.}
\end{verbatim}
in the form \textit{sdmyrf} (cf. § 204):

\begin{verbatim}
\textit{tmh$rs hpr m hsbt “If it does not become worms”;}\footnote{2 Eb. 25, 6.}
\end{verbatim}
and in the verbal adjective (cf. § 293):

\begin{verbatim}
\textit{fltf$i sv, tmf$i Ch$2 hrf “He who unlooses it (the boundary) and does not contend for it”;}\footnote{3 LD II, 136h.}
\end{verbatim}
further as an optative in final and interrogative clauses.

377. The circumlocution \textit{tm rài}, which according to the above means “not to cause that”, is very often employed to substantivize a negative clause of intention; since \textit{tm} is then an infinitive, this combination is also construed as such:

\begin{verbatim}
“The boundary is erected
\end{verbatim}
γ. THE NEGATIVE ADJECTIVE. 378.

The adjective \( \text{tm rd} \) \( \text{sn} \) \( \text{sw} \) \( \text{nhs} \) \( \text{nb} \) in order that no negro at all should overstep it"\(^1\) (lit. "to cause that not any negro should overstep it").

\( \text{tm rd} \) \( \text{hp} \) \( \text{drwy} \) \( \text{p} \) \( \text{w} \) "It is something (i. e. a remedy) in order that the vulture may not steal"\(^2\).

B. In the popular language of the n. e. \( \text{tm rd} \) occurs with weakened meaning, for simple negation: \( \text{tm rd} \) \( \text{m3n} \) \( \text{t} \) \( \text{w} \) "that I did not see thee"\(^3\).

γ. THE NEGATIVE ADJECTIVE.

The adjective \( \text{i} \) \( \text{wt} \) \( \text{i} \), which belongs to the 378. formations of § 132 sq. and is derived from the negative \( \text{ivt} \) of § 371 A, originally meant something like "not having", e. g.:

\( \text{sct ivt ss} \) \( \text{s} \) \( \text{ss} \) "A book which has not its writing"\(^4\), i. e. a book without writing.

\( \text{iw} \) \( \text{ti} \) \( \text{m} \) \( \text{w} \) \( \text{f} \) "the motherless one"\(^5\).

A. The pyr. write it \( \text{i} \) \( \text{wt} \); the rare writing \( \text{st} \) \( \text{ti} \) also seems to be old.

B. In such combinations it has also been preserved in the Copt. as \( \text{AT} \)-. Cf. C§ 89.

\(^1\) LD II, 136 i. \(^2\) Eb. 98, 5. \(^3\) Westc. 8, 11. \(^4\) Eb. 30, 7. \(^5\) Peasant 64.
379. It is a remarkable fact that this *iwtu* is used in the old language as a negative companion to the relative adjective *nti* (cf. § 401 sq.) and like the latter attaches clauses of all kinds:

\[
\text{išt twy nt išt}^{?} \text{uvt skdwt hrs} \quad \text{"This place(?) of the spirits, on which there is no navigation"}^{1} \quad \text{(with junction of the nominal sentence skdwt hrs} \quad \text{"Navigation is upon it").}
\]

\[
\text{iwtu}^{?} \text{uvt rh bw nti st} \text{ṭm} \quad \text{"Those whose place is not known". (clause: rh bw "The place is known")}^{2}
\]

380. As is observable from the examples cited, this is often employed as a substantive also; where it stands in the feminine entirely without addition (cf. 95, 4), it means "that which is not":

\[
\text{"that which is and that which is not"}^{3}
\]

(i. e. everything).

c. DEPENDENT AND SUBSTANTIVIZED CLAUSES.

381. On the usual case of the dependent clause, where a verb is dependent upon *rāl "to cause"* cf.

---

1 Totb. ed. Nav. 149 c, 17.  
2 ib. 79, 5.  
3 LD II, 149.
§ 179.—On clauses dependent upon other verbs cf. § 189.—On the dependence upon conjunctions cf. § 190. 302.

The substantivized forms of § 282 sq. take the place of a great part of the dependent clauses of our own language; parallel with these, another method of substantivizing is used in the same manner, viz. by prefixing ntt, every sentence may be converted into a substantive and made dependent upon verbs or prepositions:

\[ \text{\textit{iw} \textit{rhw} \textit{ntt \ i} \textit{hw \ p} \textit{r} \textit{pt} \text{"I know that Karnak is a region of light".} \]

\[ \text{\textit{hr \ ntt \ rd} \textit{sn \ t} \textit{3-h} \textit{d pn \"Because they give this white bread".}} \]

If a sentence of the kind treated in § 246 (\[ \text{\textit{iw} \textit{rhw}} \) be substantivized by means of this ntt, the subject is not expressed by the auxiliary verb, but by means of the old absolute pronouns of § 80:

\[ \text{\textit{hr \ ntt \textit{mr} \textit{hw} \textit{rhw}} \text{"Because of the fact that I know" (i.e. "because I know"),} \]

1 LD III, 24d. 2 Siut I, 311. 3 Totb. ed. Nav. 72, 5.
Erman, Egypt. gramm.
d. TEMPORAL CLAUSES.

384. If no conjunction is used for the introduction of the temporal clause, it can be recognized as such only by means of the connection. As a rule it precedes the principal clause, cf. e. g.

\[ \text{"As the earth became light, I came to Ptn".}^1 \]

\[ \text{"When those who are in Egypt heard it, they laid their heads upon the earth".}^2 \]

More rarely it follows the principal clause:

\[ \text{"Be not silent, when he is at (?) as we say "at work") a wicked speech".}^3 \]

385. The temporal clauses which are introduced by the conjunctions (really prepositions) \( \text{hft \ "when, as", nbi hft \ "after"}, s3^4 \ "after", as a rule, follow the principal clause:

\[ \text{"I followed my lord as he sailed up".}^5 \]

---

1 Sinuhe 20. 2 LD II, 149f. 3 Prisse 5, 14. 4 Siut I, 298. 5 LD II, 122a.
On the other hand the clauses with $\Delta \text{yr mht} \text{ "now after"}$ so common at beginning of paragraphs, always precede (cf. § 325; 244).

**e. THE CONDITIONAL SENTENCE.**

The conditional clause precedes the principal clause. It may be introduced by means of a particle like $\text{dr}$ and $\text{mi}$, but may also stand without such introduction.

It is always left without a particle, when it contains any other verbal form than $\text{sdmf}$ (frequently $\text{sdmhrf}$ cf. § 204) or is a nominal sentence:

$\text{whr} \text{mhrk} \text{ mr} \ldots \text{ddhrk} \text{ "If you examine again (lit. repeat the examining) ... then say &c."}$.\(^1\)

$\text{r-hmt-l} \ldots \text{hrl, lw} \text{ mhkwl} \text{ "A third of me (added) to me, then I am full".}^2$

If the conditional clause contains the form $\text{sdmf}$, it can likewise be left without a particle; the verbal form then always belongs to the "second group" (cf. § 184. 188):

---

\(^1\) Eb. 36, 15.  \(^2\) Math. Hdb. 35. 36.
psštn grt śht nbt ... ḫprt pw m r 360 "If now ye divide all . . . , it (the result) is 1/360".¹

389. As a rule, however, a conditional sentence containing the form sdmf, is introduced by ⲟ Ⲟ ir; in this case the verbal form always belongs to the "first group":

ir gmk dḏlsw ... ḫm ḫwkt "If thou findest a wise man . . . then bend thy arms"² (out of reverence).

A. In the pyr. a ⲟ Ⲟ in is used instead of ir.

390. If a number of conditional clauses are connected, the construction with ir is, as a rule, employed only with the first, while the second is treated according to § 388:

ir ḫm (abbreviation) šḥr mn r³-ibf, gmmk št šḥr psdf ... ddḥrk "If you examine a man who is diseased in his stomach (?) , and you find it upon his back . . . then say &c."³

391. The introduction of the conditional clause by means of ⲟ ⲟ ml or ⲡ m, is far more rare:

¹ Siut I, 286. 300. ² Prisse 5, 10—11. ³ Eb. 40, 5.
RELATIVE CLAUSES.

α. WITHOUT A CONNECTIVE.

The custom of joining one of the usual verbal forms as a relative, directly to a noun, is rare and doubtless obsolete. The pseudoparticiple is thus used in “The land in which I was born”.

Nominal clauses, however, are frequently joined to a noun in this manner; cf. §§ 329. 330. 245. 249 and 227.

β. WITH SUBSTANTIVIZED VERBS.

The peculiar verbal forms of the usual relative clause, are identical with the substantivized forms treated in § 289 sq. They are co-ordinated with the noun as an apposition, at the same time agreeing

---

1 Math. Hdb. 49. 2 Mar. Cat. d’Ab. 711. 3 Sin. 159.
395. As was remarked in § 289, the forms *sdn.ni, sdm.ni* belong to the second group (§ 184) of the form *sdm.f*; in the case of the IIae gem. it is therefore \( \text{sdn.ni} \equiv wnn.t.f, \text{IIIae inf.} \equiv prr.t.f, \) *ra.i "give" \( \equiv \text{did.t.f} \) &c. — Furthermore, the masculine ending \( w \) in the form *sdm.w.f* is not usually written out (most frequently with a nominal subject, when written), just as in other cases, it is not everywhere uniformly inserted (cf. § 96).

A. In the pyr. the \( w \) is frequently written, e. g. \( \lf t \ p w \ n \ C n h, \) \( C n h.w s n \ i m f \) "that tree of life, from which they live". 1

396. Corresponding to the statement in § 197, the forms derived from the \( n \)-form have here also, nearly always the meaning of the past. The masculine ending \( w \), which in the \( n \)-form, stands quite within the word, is here never written out.

397. In those sentences in which the subject of the relative clause would be identical with the substantive to which the relative clause is connected, an attributive participle is, as a rule, used in its stead

---

1 *Merenre* 616.
(cf. § 260). There are, however, examples, in which, even in this case, a relative clause seems to be used, whose pronominal subject is, to be sure, omitted:

"300 asses, which are laden with incense".

\[ \text{whdw pw, thn hr psdf "It is the ills(?)}, \text{which have invaded his back"} \]

The pronoun which refers to the substantive to 398. which the relative clause is joined, is almost always wanting, if it is the object of the relative clause*:

\[ \text{p3 t3-hd, didl-} \]

\[ \text{wtn nl"this white bread, ye give me"} \]

\[ \text{nwt hli3tsn "the villages, they govern"} \]

\[ \text{t35 pn lrn lnl "this} \]

\[ \text{boundary which my majesty hath made"} \]

\[ \text{sh3yt lrtnf "the in-} \]

\[ \text{struction which he (lit.) made"} \]

On the other hand, if it is dependent upon a pre-

position, the pronoun is, for the most part, expressed:

---

1 *Hr-\text{wcf C. 4.} 2 \text{Eb. 40, 6.} 3 \text{Siut I, 276.} 4 \text{Una 108.}

5 \text{LD II, 136h.} 6 \text{Mar. Abyd. II, 25.}

* As often in English. **Transl.**
168  \( \gamma. \) WITH A PASS. PARTIC. \( \delta. \) WITH THE ADJECT. \( nti. \) 400. 401.

\[ smt nbt, \ rwnm \ rs \]

"every land to which I journeyed".\(^1\)

Only with the preposition \( m \) "in", "by means of" \&c. it is often wanting:

\[ bw \ wrs \ ibl \ im \]

"the place in which my heart tarries".\(^2\)

\( \gamma. \) WITH A PASSIVE PARTICIPLE.

400. The substitution of an attributive participle for a relative clause is also extended (in violation of § 397) to clauses whose subject is different from the substantive to which they are joined; this is the participial construction treated in § 261, e. g.

\[ nny \ swz \ wry \ nft \ mi \]

"There is no humble one, to whom the like is done"\(^3\) (properly, parvus factus ei idem).

\( \delta. \) WITH THE ADJECTIVE \( nti. \)

401. The adjective \( nti \) "which", which belongs to those treated in § 132 sq., was originally used in purely nominal relative clauses without a verb, especially if the subject of the relative clause was identical with the noun to which it was joined:

---

\(^1\) Sin. 101.  \(^2\) Sin. 158.  \(^3\) Sinuhe 309.  Acc. to Sethe.
6. WITH THE ADJECTIVE ntti. 402.

"every officer who was with him". ¹

"all worms which are in his body". ²

ntiw hr hrt "the overseers of the works, who are upon the mountain". ³

bw ntti st tμ "the place where they are" ⁴ (with a different subject).

A. In the pyramids is written for ntti, ⁵ for ntiw. Another archaic writing for ntiw is .

B. ntt early becomes an unchangeable particle; it first loses the plural (e. g. msw ntti m GhGf "the children who are in his palace" ⁶ instead of ntiw), later also the feminine.

The sentences of § 240 sq. made after the analogy 402. of the pure nominal sentence, may also be so joined; their verb is always in the pseudoparticiple or the infinitive with hr:

s ntti hr mn taw "a man who suffers with heat". ⁷

s ntti mr "a man who is ill." ⁸

¹ Louvre C 172. ² Eb. 20, 8. ³ Sin. 303. ⁴ Westc. 9, 3. ⁵ M. 495 = P. I. 262. ⁶ Sin. 176. ⁷ Eb. 32, 21. ⁸ Eb. 35, 10.
403. *ntī* was then further used to connect verbal relative clauses also; with negative clauses, this is always the case; but it occurs elsewhere also, where a misunderstanding might be apprehended if there were no express connection:

\[ ntī \, n \, mrf \, "\text{who is not sick}". \]

\[ knbt, \, ntī \, rdēnē \, ntn \, sw \, "\text{this bread and beer, which the officials deliver to me, and which I have given you}". \]

404. *ntī* is also often used independently, as a substantive “he who” (f. *ntt* “that which”):

\[ ntīw \, m \, šmsf \, "\text{those who are in his following}". \]

\[ ntt \, nbt \, m \, ss \, "\text{all that was in writing}" \, (i. e. written). \]

\[ swṛēn \, ntī \, mrwt \, m \, ḫtf \, "\text{Let him drink (it), in whose body there are ills}". \]

---

1 Eb. 47, 18.  
2 Siut I, 295.  
4 Prisse 2, 4.  
5 Eb. 14, 6.
with the meaning "that which is" is also used alone, especially in the idiom cited in § 380.—On the use of *ntt* to substantivize clauses cf. § 382. On the relative use of cf. § 379.
The more important signs and meanings are taken up, in the order and with the numbering current in the list of Theinhardt even where this is probably incorrect. The phonetic values are given as exactly as possible (distinguishing between \(d, d, t, t\)), but there are many details here which are still uncertain. The feminine ending is separated from the stem.

The abbreviations signify:

- **Prop.**, the proper meaning as an ideogram (§§ 36—39);
- **Trfd.**, the most frequent transferred meaning (§ 40); it was not the intention to enumerate all the homophonous words for which each sign can be used.
- **Ort. Com.**, orthographic compound; indicates the origin of the sign by the combination of two others.
- **Phon.**, the phonetic value as a syllabic sign or as an alphabetic sign (§ 32—35);
- **Det.**, value as a determinative (§§ 45—47), or the syllable which the determinative always accompanies (§ 52).
- **Abb.**, that the determinative occurs at the abbreviation of a word (§ 68).

93 Incorrect for T 20, Q 12.
Second Part.

From the Story of Sinuhe (S3-nht).

(Epic poem of the middle empire in the archaic language. Published L. D. VI, 104 seq.)

I. (ll. 12—34.) Sinuhe, a man of high position at the court of Amen-em-he't I. (c. 2100 B. c.), while on a campaign against the Libyans, learns the death of his king; this news, for unknown reasons, so terrifies him that he immediately seeks flight to Palestine.

(I passed by the red mountain.)

a "by means of" or sim. is wanting. b the peculiar ending is explained by the coming together of the dual ending and the suffix 1 sg. c Name of a fortification on the isthmus of Suez. \(hk^3\) is written defectively in this old name.

Ermann, Egypt. gramm.
From the Story of Sinuhe.

(At the † † † † † † † † † † † † Km-wr I fell down for thirst.)

a poetic for "I concealed myself". b the sentries. c construed as if it were fem. referring to a collective "the guard". d like our vulgar "pull one's self together", or "gather one's self". e p3 like a noun, in apposition with mtn.
II. (ll. 78—94.) Sinuhe, heaped with benefits by the prince of Tnu, lives many years with him.

*a* perhaps to be corrected "he cooked for me". *b* read *whtr*. *c* cancel *r* in *trnsh* according to 151. *d* "a half year"? "a year and a half"? *e* probably "thou art prosperous with me"; 80.330. *f* 125 B.
From the Story of Sinuhe.

(He also made me prince of a tribe.)

a the determinative applies to the entire expression. b 125 B; wnt refers to the land. c The determinatives of d3b can not be read with certainty in the hieratic.
From the Story of Sinuhe.

(By means of the hunt I also gained a great deal.)

\[ a \]

\[ a \] the word is wanting in the manuscript.  \( b \) scil. \( hpr \), 351.  
\( c \) the land of \( Tnw \), cf. 98.

III. (ll. 109—145.) Sinuhe defeats a hero in single combat.

(I accepted the challenge and prepared my weapons.)
From the Story of Sinuhe.

(He seized his weapons and the combat began.)

(I stepped upon his neck.)

a like a relative, 397.  b m ḫt probably as an adverb „thereafter“.  c inexact s cf. 22. 161.  d a verb is probably wanting: „[they fell to] the ground useless“.  e he shoots him therefore from behind.
IV. (Z. 241—257.) As an old man Sinuhe receives from King Wsr-tn I. the permission to return home and goes to Egypt.

\[ a \text{ the people of the dead man.} \quad b \text{ emphasis, 344.} \]
From the Story of Sinuhe.

(He goes further to the city of the king.)

(I trod the palace.)

\[ \text{a "who had followed me, while they led me". b he presents them. c Impersonal; one expects } r \text{ is8. d indicates the action of the people who lead him forth. e Nominal sentence. f old writing according to 109. f the order of words is free according to 341.} \]
(then terror seized me)

V. (Z. 263—269.) The king presents Sinuhe to the queen.

a Perhaps relative sentence: "as an ḫem whom the S. made".
b hieratic sign of unknown meaning. c i.e. "altogether".
d for they had brought them with them. e "in their hands"?
cf. 312. 76.
From the Story of Sinuhe.

VI. (Z. 279—310.) At the intercession of the queen, Sinuhe is pardoned and concludes his life at the court in great prosperity.

(and there were other good things therein)

a for mm 315. b passive. c read \(-\) ? d 329 as accompanying circumstance. e read ni and Cwi. f read mrrf? "P. whom the king loves"? g "they caused" (impersonal "they".)
From the Story of Sinuhe.

(and there was built for me my own house)

a "they gave"; the sense is, "the dirt etc. I now resigned to the desert".  b i. e. the coarse ones.  c upon which I had hitherto slept, in contrast with ḫnty.  d in contrast with tpti; read nt.  e passive.  f read ḫvs.
From the Story of Sinuhe.

(it was furnished with the best)

From the Story of the Eloquent Peasant.

(Prose text of the middle empire in language not so markedly archaic; only the speeches of the peasant are poetic. Published LD VI 108 seq.; the beginning by Griffith, Proc. Soc. Bibl. Archaeol. 1892.)

Content: a Peasant who complains of an injustice done him, before Mrwitnœ a prince of Herakleopolis, so charms the latter by his eloquence, that, with the King's assent he prolongs the peasant's affair in order thus to prompt him to further discourse.

I. (Butler 2–13.) An inferior official meets the peasant as he journeys toward Herakleopolis, and desires to rob him of his ass.

\[ a \quad b \quad c \quad d \quad e \quad f \]

\[ sic \]

\( a \) which he needs for his grave. \( b \) the statue; passive. \( c \) one expects the plural. \( d \) 50 B. \( e \) read \( \_ \_ \_ \) \( f \) read \( ? \)
II. (Butler 13—19.) The official plans a stratagem for him.

\[ a \] a hieratic sign of unknown meaning. \( b \) the name of the man is wanting. \( c \) i. e. one of the peasantry. \( d \) temporal clause. \( e \) the asses which pleased him or sim. \( f \) here he begins direct discourse. The following is probably an elliptical oath: may every excellent image [of a god] . . . . for me!\( g \) The situation must be: a narrow road; on one side water, on the other, upper side a field. \( h \) "his one way" i. e. probably "one edge of the road".
(and spreads out the clothes in the way.)

III. (Butler 22—23; Berliner Papyrus Z. 1—24.) The peasant is robbed and derided.

a passive. b the middle of the road. c "have a care" or sim. is wanting. d "[Take care] my fruit is on ( ) the road".
a [The lower part of the road is] under water.  
b "Will you not let us pass by then!"  
c meaning something like: since one [lower path] is obstructed, I will go along its [upper] edge.  
d read mḥtn?
IV. (ib. Z. 24—32.) The peasant implores the official in vain.

a relative belonging to ḥn. b probably a proverb: instead of the poor man one makes mention of his lord. c meaning: though you should address me, you think first of my lord. d the tamarisk was not dry; rāf is probably corrupt. e read the n-form. e peculiar infinitive.
V. (ib. Z. 32—42). The peasant goes to the prince and relates to him his matter.

a „you are to“ for „you go to“. b in the place of the god of the dead one must not make noise. c perhaps an invocation, to be connected with the following. d 182, the meaning of the sentence is not clear. e probably error for ○ or ○. f against the injustice.

Erman, Egypt. gramm.
VI. (ib. Z. 42—51.) The prince questions his counsellors.

a As the prince desires to sail away the peasant would not detain him. b they mean: it is probably a peasant subject to him, who unlawfully desired to deliver his taxdues to another.
VII. (ib. Z. 52—71.) The first complaint of the peasant.

a Sense probably, he must pay this as a fine; or, he should be punished because of the natron etc. (with which the asses were loaded)?  b His reply is not given.
a read ntt.  b treat me so justly that I shall prefer thy name to all laws.  c imperative.  d imperative.  e imperative.  f is wanting.  g sense is probably, prove, how much I have to bear.
VIII. (ib. Z. 71—77.) The prince announces it to the King.

Supplement.

A writing of Thutmosis I. to the Authorities in Elephantine.
(Stone in the Cairo Museum. Published Aeg. Ztsch. 29, 117 from a copy of Heinrich Brugsch.)

I. Announcement of the coronation. (The king writes to you)

II. The titulary of the new ruler.

\[^{a}\text{passive.}^{b}\text{sense optative.}\]
III. What name is to be used in the cult.

IV. What name is to be used in taking oath.

V. Concluding formula.

a read ☹. b lit. „cause that one cause that the oath remain“. c 259, 2 passive, defectively written. d formula of correspondence for „this writing purposes“. e that which is communicated. f likewise further that etc.
Examples of the Royal Titularies.

VI. Date.

Examples of the Royal Titularies.

(Written in abbreviations throughout; for explanation compare the titulary fully written out in the preceding letter.)

I. Wsrtsh I. (Lepsius, Königbuch 177).

II. Thutmose III. (ib. 349).
Examples of Grave-formulae.

(Filled with abbreviations throughout, and often in barbarous orthography).

I. The sacrificial formula. (Gravestone in Alnwick Castle).

II. The same in another form. (Gravestone in Florence).

a unintelligible formula. b optative. c relative clause.
Examples of Grave-formulae.

III. The same, shorter (Gravestone in Turin).

IV. Invocation to the visitors to the grave (LD II, 122).

V. The same, in different form (RIH 16).

---

a 259, 2, passive defectively written. b 259, 2 active, plural.
c Impv. d. the pronouncing of this formula procures the deceased nourishment.

Cc*
GLOSSARY.

PREFATORY NOTES.

The correct orthography occupies the first place; abbr. designates a writing as an abbreviation in accordance with §§ 63—68; arch. as archaic.

Compound words are to be found under the first part of the compound. The endings are separated by -, and are not taken into consideration in the alphabetic arrangement.

To a considerable extent the meanings can be only approximately determined; to such words, or sim. has been added.

The meaning of the causative has been subjoined, only where it does not entirely correspond to that of the simple stem.—The construction of the verb has been added by cc.—The §§ cited refer to the grammar. With proper names n. l. denotes the name of a place, n. pr. m. that of a man, n. pr. f. that of a woman.

3-t (§ 48, for ?) hour.
3b-w cease, or sim.
3b-w n. 1. Elephantine.
